Opportunities in the Low Carbon Economy

Solihull

May 2010

Notice

This report was produced by Atkins for Solihull MBC for the specific purpose of providing research into the business opportunities for the local economies relating to the transition to a low carbon base.

This report may not be used by any person other than Solihull MBC without their express permission. In any event, Atkins accepts no liability for any costs, liabilities or losses arising as a result of the use of or reliance upon the contents of this report by any person other than Solihull MBC.

Document & Project Structure

In 2009 Advantage West Midlands commissioned Atkins to undertake a regional review of the development of a Low Carbon Economy. Following this piece of work the West Midlands' City Region Local Authorities commissioned Atkins to undertake a more detailed look at individual council areas. This report presents the "Solihull Profile" which is one of eight profiles produced for individual Local Authorities in the City Region which provides information specific to Solihull on opportunities for the development of a Low Carbon Economy. In addition to this report there are other reports of relevance, which include seven further Local Authority reports, the Technical Report, which contains the background data and the City Region Report which looks at opportunities which affect more than one Local Authority and therefore could be supported by the City Region.

Acknowledgements

This report has benefited from advice and input from individuals within Solihull MBC, the West Midlands Regional Observatory and the City Region.

Executive Summary

This report reviews the potential for the development of a Low Carbon Economy (LCE) in Solihull. It follows on from a regional study commissioned by Advantage West Midlands and the West Midlands Regional Observatory in 2009 which identified eight key sectors that could play a key role in the delivery of a LCE across the West Midlands.

The 2009 high level review identified eight key sectors within the economy as providing low carbon opportunities based on the level of carbon regulation affecting the sector, the scale of opportunity, the existing regional strengths, existing regional action and availability of low carbon technologies. These sectors were: *manufacture of non-metallic mineral goods; manufacture of motor vehicles and transport; manufacture of metals, fabricated metal products and electrical equipment; construction; environmental goods and services; manufacture of food and beverages; transport, communication and storage, and; public services.* For each sector, key opportunities were identified and these focussed on decarbonising current products and services (such as replacing the use of a petrol vehicle to transport goods with a renewable vehicle), provision of low carbon products and services (such as freight delivery using rail), diversification into new low carbon products (such as manufacture of LEDs) or no opportunities being available. Examples of this include the manufacture of low carbon energy generation equipment by the “Metals” sector, the provision of low carbon buildings by the Construction sector and the use of more efficient equipment by the Non-Metallic Mineral Goods sectors. The study also identified a range of determining factors to the development of a LCE across the region. These included consumer demand, policy and regulatory regime, public procurement, physical and institutional infrastructure, skills and the planning regime. For each sector and for each determining factor a range of regional actions were identified.

This report identifies the key sectors of employment in Solihull; key opportunities for Solihull to protect or increase employment levels; any barriers relevant to Solihull and suggested actions to take in order to overcome them. In addition, the report identifies City Region wide actions and initiatives which could be taken jointly by the local authorities as it is inevitable that these organisations will need to collaborate on these initiatives if they are to be successful.

The Solihull profile was developed based on the following key inputs:

- *Economic Analysis:* Employment and business unit data to a 4 digit UK Standard Industrial Classification (SIC) of Economic Activities code level to understand the level of activity conducted by the eight key sectors operating within Solihull. Changes in data over the five year period 2003 to 2008 have also been reviewed.
- *Sector Prioritisation:* Based on employment and business unit data and the previous study's ranking of the sectors, sectors have been prioritised with those sectors having the largest employment levels or highest number of business units and the most potential opportunities from the regional study being considered the highest priority.
- *Local Authority Interviews:* Interviews with one or more council officials from either the Economic Development and/or Climate Change teams to gain their view on the key opportunities, barriers, current actions and future potential actions to develop a LCE in their area.

Based on the information contained in the profile, a list of potential opportunities was developed in order to develop a LCE. Each opportunity has been assessed in terms of impact on jobs and for regulatory drivers.

The highest employment within the eight key opportunity sectors are public services; transport, storage and communications; construction, and; manufacture of motor vehicles and transport. Solihull had growth in the following sectors over the period 2003-2008: construction (67%), transport, storage and communications (5.8%) and non-metallic mineral goods (272% increase, but only limited employment sector). Motor manufacturing saw a decrease by 37% and public services by 11%.

Solihull has limited institutional research, although some businesses within the area conduct their own research and development and are linked in either regionally or nationally to low carbon networks and/or clusters. Furthermore, the area has high quality business facilities across its area, attracting head offices of national businesses and Solihull Airport to the north of the area.

Based on the ranking exercise, key opportunities for Solihull were found to be construction; manufacture of motor vehicles and transport, and; manufacture of non-metallic goods. Opportunities that were considered to have the potential to create jobs included the following:

- Construction: Low carbon design and construction ; Low carbon renovation of housing stock; Provision of low carbon construction services and trades
- Manufacture of Motor Vehicles: Manufacture of low carbon transport equipment; Low carbon vehicle design; Development of alternative fuels and infrastructure
- Transport, Storage & Communications: Development/use of alternative fuels and associated infrastructure

Environmental Goods and Services: Provision of specialist advice to all sectors; Development of low carbon community energy companies/schemes

Low carbon procurement, the provision of low carbon education and planning to support the low carbon economy develop were all considered to be important public sector opportunities. Barriers were seen to include access to research and development and uptake or low carbon support services.

1. National & Regional Context

In December 2007, Advantage West Midlands produced a new Regional Economic Strategy for the West Midlands: *Connecting to Success*¹, endorsed by Jonathon Porritt, the then Chair of the UK Sustainable Development Commission. Hailed as a landmark strategy, *Connecting to Success* has been formally recognised as the UK's first low carbon economic strategy and has established Advantage West Midlands as a leader amongst the regions. The lessons from developing this strategy are featured in *Evidence of Success*².

The evidence base for this strategy helped to define for the first time what a low carbon economy is and what this meant to the West Midlands:

*"In the West Midlands a low carbon economy means an economy that will underpin a prosperous and thriving region through capturing the economic benefits of increasing efficiency whilst reducing direct carbon emissions and using the region's strengths in engineering, science and technology to deliver low carbon solutions to national and international markets. For **Business** this means fully capturing the opportunities for both existing industries and new enterprises to ensure the West Midlands region secures a reputation for profitable low carbon enterprise. For **People** this means up-skilling to secure the benefits from new employment opportunities emerging from a low carbon economy, along with behavioural change, to enhance quality of life. For **Place**, this means creating the conditions for growth by optimising transport networks and developing a low carbon built environment through energy efficiency and renewable materials".*
(AWM, 2007).

The evidence base for the development of the strategy helped to set out what a low carbon economy strategy should look like and the type of interventions to generate the biggest productivity gains and carbon reductions. One of the actions within the strategy was to "help identify low carbon economic and climate impact opportunities and risks for regional business and skills needs".

The low carbon agenda has progressed considerably over the past few years as understanding and scientific evidence for climate change has received universal acceptance, internationally, nationally and locally. As a result of international negotiations and commitments, the UK Climate Change Act 2008 established a legally binding target of 80% carbon emissions reduction by 2050; a target which will require significant and coordinated action across all sectors of the economy. Following the Climate Change Act the UK Government launched the Low Carbon Transition Plan³ which sets out how the UK will meet the 34% reduction in emissions required by 2020 detailing actions for individual sectors of the economy. In parallel, a number of associated commitments have been made, all of which will need to be implemented at a local level. These include the following:

- More than 1.2 million people will be in green jobs.
- 7 million homes will have benefited from whole house makeovers, and more than 1.5 million households will be supported to produce their own clean energy.
- Around 40 percent of electricity will be from low-carbon sources, from renewables, nuclear and clean coal.

¹ Connecting to Success, Advantage West Midlands, 2007

² Evidence of Success, Advantage West Midlands, 2008

³ The UK Low Carbon Transition Plan, HMG, 2009

- We will be importing half the amount of gas that we otherwise would.
- The average new car will emit 40 percent less carbon than now.

In order to achieve these targets, the Government has and is continually developing legislation, policy, strategies, plans and schemes. These will be applicable nationally, regionally, locally and even for individuals, and will contribute cumulatively to meet the commitments established internationally and through the UK Low Carbon Transition Plan.

Regionally there have been a number of relevant developments, including:

- from individual Local Authorities, through initiatives such as the Nottingham Declaration, to reduce carbon emissions.
- The recent announcement of the Low Carbon Economic Area for advanced automotive engineering within the region⁴.

The economic opportunities arising from the shift to low carbon and the implications for business models extend across the West Midlands economy. Significant Government investments have already begun, and will continue on all scales, impacting upon the opportunities available to drive the economy.

The Carbon Trust report, *Climate Change - a Business Revolution*⁵ shows how tackling climate change can create opportunities for a company to increase its value by up to 80% if it is well positioned and proactive. Conversely, it could threaten up to 65% of its value if a company is poorly positioned or a laggard.

Opportunities and risks in the economy are driven by shifts in consumer behaviour, technology and innovation and regulation. Targeted policies and support measures are therefore required as a key initiator of change across the West Midlands economy.

The first report in this study reviewed opportunities for the development of a Low Carbon Economy across the region. This report goes on to look at opportunities for the development of a Low Carbon Economy within Solihull.

2. Introduction

In 2009, Atkins carried out research on behalf of AWM and West Midlands Regional Observatory (WMRO) to investigate the opportunities and barriers to the growth of a Low Carbon Economy (LCE) across the West Midlands region. This initial, high-level and region-wide research provided a broad indication of how well the business sectors within the West Midlands Economy are positioned to embrace the opportunities and risks associated with transition to a LCE.

The initial study was well received by WMRO and the group subsequently decided that more detailed research would be beneficial. The new study would assist decision makers at the local authority level, particularly those in the City Region, including Solihull.

This report provides a more detailed review for Solihull. It includes:

- More detailed economic data for employment and businesses specific to Solihull
- Input from interviews with Solihull officials
- Clusters relevant to Solihull which may support the development of a Low Carbon Economy
- Barriers specific to Solihull which may prevent opportunities being achieved
- Identification of opportunities relevant to Solihull along with suggested actions
- An assessment of the opportunities for Solihull in terms of supporting employment and meeting carbon regulation

A profile has also been generated for the City Region as a whole using City Region economic data and findings for each of the Local Authorities. This is relevant to Solihull as opportunities and barriers have been identified which affect more than one Local Authority and suggested actions may be relevant to Solihull.

3. Previous Relevant Studies

The key outputs from the previous regional studies are summarised below and key outputs have been included in Technical Report Section A and B of this report as noted below. The following has been taken from a URS study into the Low Carbon Evidence Base for the West Midlands Regional Observatory Economic Strategy (2007):

Sector Exposure: The level of exposure to climate change related regulatory change for key sectors was identified as being high, medium or low risk. The potential exposures for sectors were assessed for both products and services and for operations (see Table A1 in Technical Report Section A)

Local Authority Exposure: The level of exposure to climate change related regulatory change for Solihull was identified. This identified both the percentage of employees and businesses at high risk of being affected by carbon reduction policies (see Table A2 in Technical Report Section A).

The following has been taken from the Atkins 2009 Regional Low Carbon Economy study:

Sectors: Individual business numbers and people employed across all sectors for the West Midlands were analysed (see Table A3 in Technical Report Section A). Eleven sectors were identified as currently making a large contribution to the West Midlands economy (in terms of employment and business size). These are identified below:

- Business Services (including finance & insurance)
- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Motor Vehicles and Transport equipment
- Manufacture of Metals, Machinery & Equipment and Electrical Equipment
- Manufacture of Non-Metallic Mineral Products (glass & ceramics).
- Public Sector Services (incorporating, Education, Health & social work and Public administration & defence)
- Tourism & Leisure (incorporating Hotels & Restaurants and elements of Other Community services)
- Transport, Storage & Communications
- Wholesale & Retail Trade

Low Carbon Opportunities: Specific low carbon opportunities were identified for each of the employment sectors identified, (see generic opportunity profiles in Technical Report Section B). The objective of this analysis was to show how organisations can reduce carbon across their operations, products and services, and therefore give an indication of how regional and local bodies can focus their efforts to assist the strategic shift to a Low Carbon Economy. The generic profiles also summarise regional activity and opportunities in these sectors and also relationships between the sectors.

The regional study identified key sectors which present the greatest opportunity in terms of development of a Low Carbon Economy to the region. Using the following criteria: (i) Carbon Regulation and policy encouraging the development of a Low Carbon Economy in the sector, (ii) the Scale of Opportunity for the particular sector based on size of the sector, (iii) Existing Regional Strengths relevant to the sector, (iv) Existing Regional Action relevant to the sector, (v) Low Carbon Technologies available for the sector an evaluation was undertaken of the 11 key sectors to determine where the best opportunities for future growth lie. A simple scoring methodology was used to qualitatively evaluate these opportunities on the following basis: (H: High opportunity (3);

M: Medium opportunity (2); L: Low opportunity (1)). These scores were then summed across the above criteria for each of the above 11 sectors. The results of this evaluation are outlined in Table A4 in Technical Report Section A. The eight sectors identified as providing the most opportunity in the region were identified as follows:

- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Metals, Fabricated Metal Products and Electrical Equipment
- Manufacture of Motor Vehicles and Transport
- Manufacture of Non-Metallic Mineral Goods
- Public Services
- Transport, Storage and Communication.

Barriers and Potential Interventions: Table A5 in Technical Report Section A summarises the key factors with the potential to constrain and/or drive the development of a LCE in the region along with potential government interventions to assist and possible areas of regional influence.

Sector Wide Opportunities, Barriers and Regional Solutions: Table A6 in Technical Report Section A summarises for each sector the key opportunities for the sector, the potential barriers and regional solutions which may be available plus an indication of whether the suggested actions are short-term, medium-term or long-term.

4. Project Aims & Intended Audience

4.1 Project Aims

The overall objective of this project is to give each City Region Local Authority more detailed information to support the strategic planning for the LCE within their Authority. In summary the main aims for Solihull are:

- To understand key employment in Solihull
- To identify key opportunities for Solihull to protect or increase employment
- To identify any barriers and key actions for Solihull to support the development of a LCE
- To determine which actions across the City Region can be undertaken in collaboration by the City Region and Local Authorities

4.2 Intended Audience

The findings of this part of the study are directed towards officials working within the Local Authority, plus the City Region, the West Midlands Regional Observatory and Advantage West Midlands. In addition there are a range of other stakeholders to whom this project will be of interest including business support organisations and public and private sector organisations. Each of these stakeholders will need to identify and consider their role in the delivery of the LCE, both individually and in partnership with other stakeholders. However, a summary is outlined below of how each of the principle stakeholders could use this report to assist the strategic shift to a LCE:

- **Sub-regional policy makers** – to understand the implications and actions required within local economic assessments and strategies to deliver a lower carbon economy through planning control and land-use policies.
- **Business support organisations** – to understand the drivers, opportunities and interventions required to assist the transition to a LCE.
- **Individual public and private sector organisations** – to understand and develop the opportunities for their sector.

5. Project Methodology

The delivery of this project has been divided into a number of elements.

Economic Analysis

Using the eight key sectors identified in the initial study analysis of both employment and business unit to a 4 digit UK Standard Industrial Classification of Economic Activities (SIC) code level has been undertaken using 2008 data available on NOMIS for each Local Authority. This provides detailed information for Solihull on exactly what type of activity is taking place within their area. For the employment analysis the Annual Business Inquiry (ABI) Employee Analysis data available on NOMIS was used, which is an employer survey of the number of jobs held by employees. The NOMIS survey records a job at the location of an employee's workplace. For the Business Unit analysis the Annual Business Inquiry (ABI) Workplace Analysis data available on NOMIS was used, which is a survey of the number of workplaces in an area. The data is presented using the following broad categories:

- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Metals, Fabricated Metal Products and Electrical Equipment
- Manufacture of Motor Vehicles and Transport
- Manufacture of Non-Metallic Mineral Goods
- Public Services
- Transport, Communication and Storage

The output of this analysis is provided in below and supporting data is provided in Technical Report Section C (for business unit data), Technical Report Section D (for employment data) and Technical Report Section E (sectoral change over the period 2003 to 2008). Please note data provided in this report has been rounded to the nearest 100 (unless <100) for employment figures and the nearest 10 for business units, as recommended by the Office of National Statistics.

Identification of key sectors of opportunity for each Local Authority

The eight key sectors this study focuses on have been selected based on the work undertaken at a regional level as part of the 2009 AWM Regional Study undertaken by Atkins. This study has been reviewed and tested by a number of regional groups and has been well received. In order to identify which of these sectors provide the most opportunity for development of a LCE in Solihull the following elements have been ranked to provide key sectors of focus for Solihull:

- Solihull's employment data (both number of jobs and number of businesses)
- Sectoral opportunities based on the regional study (as reproduced in Table A4 in Technical Report Section A)

The key sectors with opportunities in the LCE are reported in section 8 below.

Interviews/workshops within each Local Authority

A structured interview was undertaken with one of more officials of the Local Authority's Economic Development Department and/or Climate Change/Environmental Department. The interview was intended to capture the officials' views on the following key areas:

- Review of Solihull's key sector opportunities
- Review of barriers for each sector and general barriers
- Identification of key geographical clusters within Solihull

- Identification of potential policy interventions and recommendations

The results of the interview has been utilised in the in the development of this report and a summary of the interview is provided in Technical Report Section F..

Development of Solihull's Profile

Using the information gathered above, a Profile was developed for Solihull. This profile contains a summary of key information relevant to Solihull, as follows:

- A prioritised set of key sectors
- A set of specific opportunities for Solihull.
- Relevant geographical clusters
- Any specific barriers for Solihull
- Potential policy interventions or other recommendations

Assessment of opportunities

Opportunities have been assessed for impact on jobs and in meeting carbon legislation.

Jobs: Taking each of the key opportunities identified for Solihull, as discussed above, the impact of implementation on jobs within the area has been assessed. For example, if the only opportunities available were simply to meet regulation as implemented, this may lead to a continuing to diminish workforce, whereas if the sector could be the first in the UK to patent a low carbon technology this could dramatically increase the workforce. For opportunities that have the potential to significantly contribute to an increase in employment levels (i.e. greater than 10% growth within that sector for a particular region) they have been identified as being of regional significance. It is stressed that the ability to predict employment growth is, by its nature, imprecise and dependent upon a number of variables. We must emphasise, therefore, that our estimates are, at best, indications of opportunities with the potential to increase employment. They do not constitute a guaranteed or reliable estimate of employment levels in these sectors in the future.

Regulatory and other key drivers: Each opportunity has been assessed for the impact of the opportunities on meeting carbon legislation and other relevant key Governmental drivers, such as the Climate Change Act, Carbon Budget Orders, Emissions Trading, the Carbon Reduction Commitment the Renewable Transport Fuel Obligation, the Environmental Transformation Fund, etc.

City Region-wide Opportunities: The relevance of each opportunity has been considered for each Local Authority and where an opportunity is relevant to a number of Local Authorities and a joint approach is considered beneficial this opportunity has been determined as a City Region opportunity.

The opportunity assessments are provided in Section 10 and a summary of key regulatory and policy drivers is provided in Technical Report Section G.

6. Local Authority Context

Solihull MBC has signed up to reduce carbon emissions by 10% by the end of 2010 as part of the 10:10 campaign as well as a target to reduce emissions by 33% by 2012 as part of its participation in Phase 6 of the Local Authority Carbon Management Plan. The Council is already part of the Carbon Trust's Local Authority Carbon Management Programme and is a signatory of the Nottingham Declaration on Climate Change. The Council has also adopted two climate change Local Area Agreement National Indicators – 185 and 188. The Council has committed to “seek to minimise and adapt to climate change by ensuring sustainable forms of economic activity and lifestyles which reduce carbon emissions and make more efficient use of natural resources” as part of its Sustainable Community Strategy⁶.

The Council has developed a Climate Change Strategy; the main aims of which are:

- Reduce the Council's carbon, waste and water footprint
- Understand the impact climate change may have on Council buildings, land and services and identify how they can be adapted to ensure future risk is minimised
- Lead the community in tackling climate change through direct influence, communication and engagement

As part of the Strategy, the Council has developed an extensive list of actions to support these aims.

The Council has also developed a Carbon Management Plan which draws together data on the baseline year emissions, initial technical projects for reducing emissions and management actions to ensure that carbon is mainstreamed into the corporate decision making process and activities of the council. To supplement this work, the Council has also produced a range of other policies and strategies including the 'Buildings and Schools Energy Policy', 'Home Energy Efficiency and Affordable Warmth Strategy' and the 'Green Travel Plan'.

Current actions and initiatives to-date include:

- Driver training – it is hoped that this will help change behaviour and avoid unnecessary emissions
- Improving dishwasher efficiency in schools.
- Work on green travel plans, in collaboration with Centro
- Working with the NEC group to use their assets for waste management.
- Encouraging companies to sign up to the Carbon Trust standard.

Figure 6.1 sets out the employment by sector in the conurbation of Solihull based on the NOMIS survey data compared to the rest of the City Region. Employment in the Local Authority of Employment in the public service sector accounts for just 44% in Solihull of the sectors listed. Construction and transport, storage and communications are important sectors, together accounting for 36% of employment. Manufacture of the motor vehicles and transport at 15% of employment is the highest for the sector across all eight areas of the study.

Figure 6.2 shows the relative employment within the eight key sectors compared to the City Region and West Midlands as a whole. Manufacture of Motor Vehicles, Construction and Transport, Storage and Communications are all strong relative to the rest of the area.

Figure 6.1 – Solihull's employment in the eight key sectors of low carbon opportunity compared to the rest of the City Region

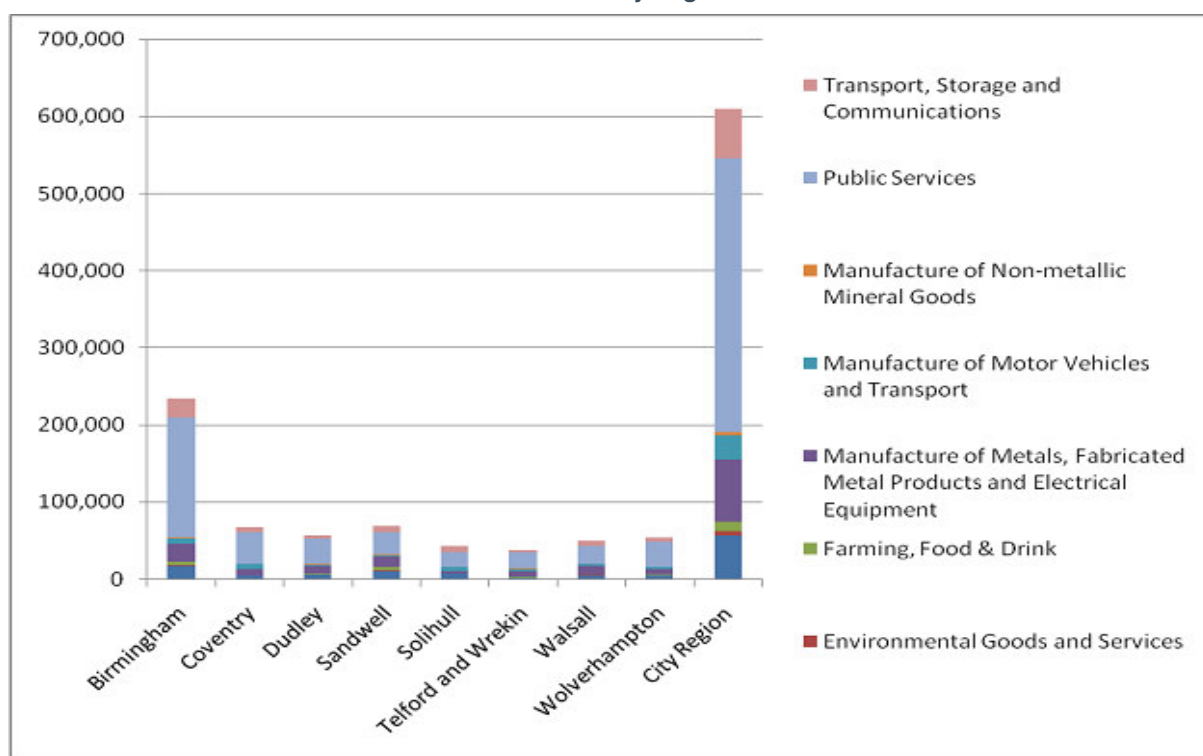

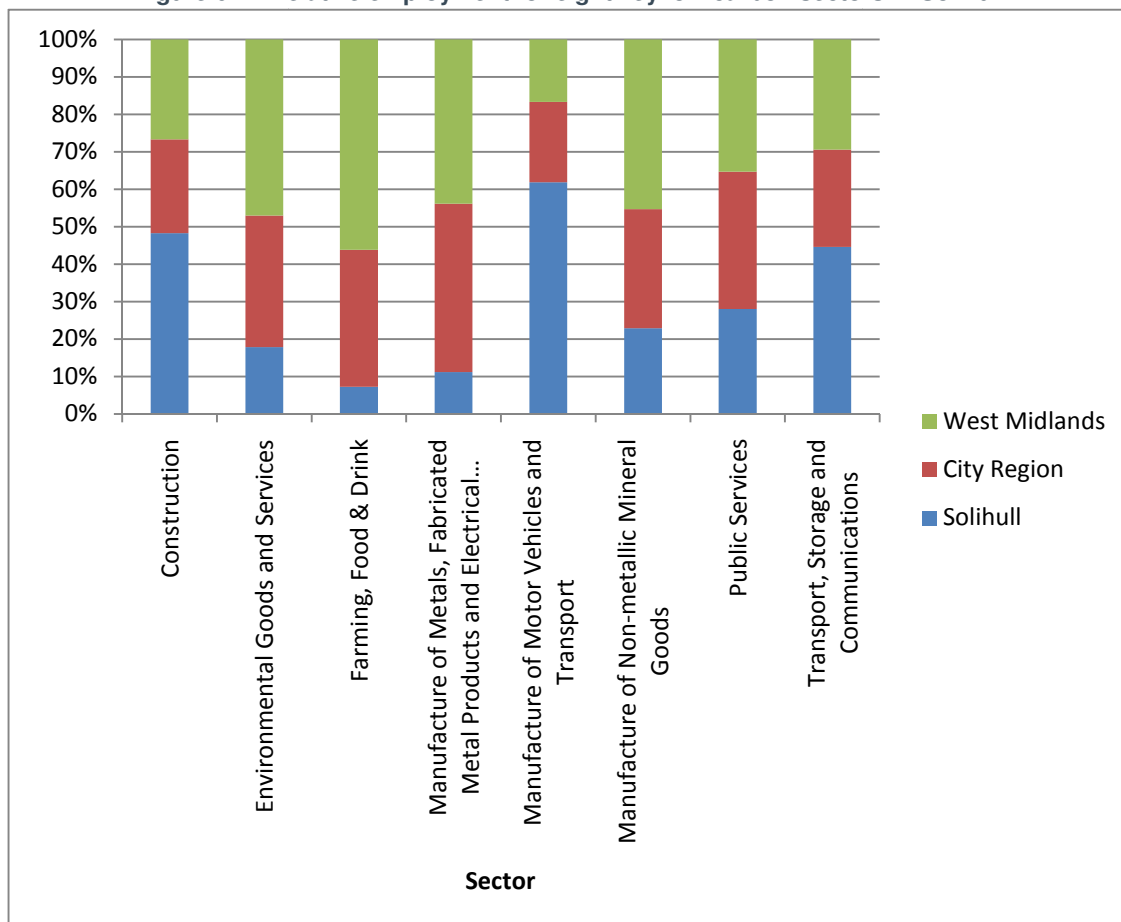

Figure 6.2 - Relative employment for eight key low carbon sectors in Solihull

The Annual Business Inquiry analysis which looks in depth at particular strengths within each of these sectors found specific specialism within the following areas:

Table 6.1 - Key Sub-sector specialisms within Solihull for Employment and Businesses (based on 2008 data)

Sector	Relative strengths compared to rest of City Region	Largest Employment Subsectors (by number)	Largest Business No. Subsectors
Construction	Strong in general construction of buildings and civil engineering works, installation of electrical wiring and construction of highways, roads, airfields and sports fields. Medium in construction of water projects; buildings and civil engineering works	General construction of buildings and civil engineering works (4,500) Installation of electrical wiring and fittings (1,300) Construction of highways, roads, airfields and sports facilities (400)	General construction of buildings and civil engineering works (250) Installation of electrical wiring and fittings (130) Plumbing (110)

Manufacture of motor vehicles and transport	Strong in manufacture of motor vehicles; motorcycles. Medium in building and repairing of ships; other transport equipment	(Limited statistics available) Manufacture of motor vehicles (5,900) Manufacture of bodies (coachwork) for motor vehicles: manufacture of trailers and semi-trailers (200) Manufacture of parts and accessories for motor vehicles and their engines (200)	No detailed statistics available.
Manufacture of Non-Metallic Goods	Strong in cement; fibre cement. Medium in other ceramic products; mortars.	(Limited statistics available) Manufacture of cement (200) Manufacture of ready-mixed concrete (10) Manufacture and processing of other glass including technical glassware (10)	No detailed statistics available.
Public Services	Employment across most sectors e.g. hospitals, education, social work, etc	Primary education (4,000) Hospital activities (2,500) General secondary education (2,400)	(Limited statistics available) Social work activities without accommodation (130) Primary education (80) Medical practice activities (80)
Manufacture of Materials and Fabricated Metal Products	Very limited levels of employment compared to rest of City Region. Strong in machinery for paper and paperboard production; television and radio transmitters, sound/video recording and apparatus for telephony/telegraphy.	(Limited statistics available) Manufacture of television and radio transmitters and apparatus for line telephony and line telegraphy (600) General mechanical engineering (300) Manufacture of electricity distribution and control apparatus (100)	(Limited statistics available) General mechanical engineering (30) Manufacture of other fabricated metal products not elsewhere classified (10) Manufacture of tools (<10)
Transport, Storage & Communications	Strong in air transport activities; non-scheduled air transport; scheduled air transport; cargo handling; other supporting water transport activities; space transport; storage and warehousing; other supporting land transport activities; activities of travel agencies and tour operators. Medium in activities of other transport agencies	(Limited statistics available) Space transport (1,900) Transport via railways (1,500) Taxi operation (1,000)	(Limited statistics available) Activities of travel agencies and tour operators; tourist assistance activities not elsewhere classified (200) National post activities (100) Courier activities other than national post activities (100)

Environmental Goods and Services	Limited employment in sectors compared to rest of city region	Manufacture of electricity distribution and control apparatus (100) Manufacture of electric motors, generators and transformers (20) Recycling of metal waste and scrap (<10)	No detailed statistics available.
Farming Food and Drink	Limited levels of employment across sector compared to other city region local authorities. Strong in manufacture of mineral waters and soft drinks	(Limited statistics available) Manufacture of mineral waters and soft drinks (80) Manufacture of bread; manufacture of fresh pastry goods and cakes (40) Production and preserving of poultry meat (20)	No detailed statistics available.

Although the manufacture of non-metallic mineral goods accounts for just 1% of employment the sector has experienced growth of 272% between 2003 and 2008. It is assumed that the rise is due to the establishment of a new business in the area. The construction sector experienced a 67% increase, while employment in transport, storage and communications grew by 5.8%.

Despite the manufacture of motor vehicle and transport accounting for 15% of employment the sector experienced a fall of -37% in employment over the five year period to 2008.

Solihull was the only area to experience a fall in employment in the public services sector of -11%.

7. Clusters

Clusters or networks of research, similar company types, networks, etc can help facilitate the development of a LCE. The area itself was found to have limited networks/clusters specific to the area and given that many of the companies based in the area have their head-office in Solihull they tend to network at more of a regional or national level with universities, trade organisations, research and development centres, etc. Relevant organisations to the area include the following:

- **West Midlands Centre for Constructing Excellence (West Midlands Centre for Constructing Excellence).** The West Midlands Centre for Constructing Excellence provides specialist business improvement assistance specifically to help local businesses in the construction and building technologies sectors. Eligible businesses in the West Midlands can benefit from subsidised, or in some cases fully-funded, business improvement services.
- **Business Link West Midlands**
- **West Midlands Manufacturing Advisory Services** – assists manufacturing businesses in the region as they strive to become fit for the future.
- **Technology Based Business Support** – Solihull MBC and University of Warwick Science Park offer support services designed to maximise potential for growth in technology based business start-ups and SME's.
- The West Midlands being designated as a “**Low Carbon Economic Area**” for Advanced Automotive Engineering
- **Business Forums** free networking and information sharing forums for local businesses by Solihull MBC at a number of key employment sites across the area
- **National Industrial Symbiosis Programme (NISP)** NISP has been operating in the West Midlands since 2003. NISP uses industrial symbiosis to identify sustainable resource management solutions for businesses. Its main aim is to help businesses improve resource efficiency and reduce waste. Industrial symbiosis engages traditionally separate industries with the aim of improving cross industry resource efficiency through the commercial trading of materials, energy and water and sharing assets, logistics and expertise.
- **A range of national and regional clusters** with a sector specific focus, including those led by Advantage West Midlands and the Carbon Trust. More details are given in the generic profiles in Technical Report, Section B.

8. Opportunities

In order to identify which of the sectors provide the most opportunity for development of a LCE within Solihull the following have been ranked to provide key sectors of focus:

- Local Authority employment data (both number of jobs and number of businesses) for 2008 taken from the relevant ABI reports
- Sectoral opportunities based on the findings of the Regional study (as presented in Table A4 of Technical Report Section A)

Table 8.1 below shows the outcome of the ranking exercise for Solihull (the lower the overall ranking the higher the opportunity has been calculated to be for that particular sector). The sectors showing the largest opportunities based on the regional study and employment and business numbers within the Solihull MBC area are construction, manufacturing of motor vehicles, and manufacture of non-metallic goods.

Table 8.1 - Ranking of Sectors for Low Carbon Opportunities for Dudley

Sector	Opportunity Ranking	Employment Ranking	No. of Businesses Ranking	Overall Ranking (=A+(B+C)/2))
Construction	3 (14)	3 (7736)	1 (883)	5
Manufacture of Motor Vehicles and Transport	1 (15)	4 (6343)	4* Not disclosed	5
Manufacture of Non-Metallic Goods	1 (15)	6 (216)	6* Not disclosed	7
Public Services	7 (12)	1 (18985)	2 (608)	8.5
Manufacture of Materials and Fabricated Metal Products	3 (14)	5 (1417)	4 (131)	7.5
Transport, Storage & Communications	7 (12)	2 (7786)	3 (369)	9.5
Environmental Goods and Services	3 (14)	8 (162)	8* Not disclosed	11
Farming Food and Drink	6 (13)*	7 (165)	7* Not disclosed	13

These sectors are considered to be attractive to Solihull for the following reasons:

- **Construction:** Solihull has reasonable levels of employment across the construction sector focussed and this sector is likely to employ some of the lower skilled employees in the area. Regulatory pressure to reduce carbon emissions associated with building construction provide opportunity to the sector and links to Solihull's design and consultancy employment base may offer Solihull opportunities in construction of low carbon designed buildings. Furthermore the need to retrofit older housing stock using low carbon techniques offers low carbon opportunities for the sector e.g. installation of low carbon heating, glazing, plumbing systems.
- **Manufacture of Motor Vehicles and Transport:** After Solihull, Solihull employs the second most people in the automotive sector in the City Region, with significant employment in manufacture of motor vehicles. Low carbon vehicle design offers significant opportunities for diversification for the sector. The industry also faces international competition therefore decarbonising processes is important to retain competitiveness.
- **Manufacture of Non-metallic Goods:** Solihull has strength within this sector in manufacture of ceramic products, mortars, fibre cement and cement. The main pressure on this sector comes from emissions of CO₂ related to cement production. Opportunities for Solihull in this area include emission mitigation via energy efficiency improvement, new processes, use of low carbon fuels and diversification to alternatives.

9. Barriers

Table 9.1 below summarises the general barriers identified for the Solihull MBC area in the development of a LCE. These are based on the interview with Solihull MBC plus those relevant which were identified during the regional study (shown in Table A5, Technical Report Section A).

Table 9.1 - Summary of Region-wide and Solihull Specific Barriers to the Development of a LCE

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong ** = Fairly Strong * = negligible)	
Consumer Demand	<ul style="list-style-type: none"> Consumers will not pay a premium purely for greener products. Lack of incentives for businesses and consumers to move to low carbon products/ services 	<ul style="list-style-type: none"> Sufficient market demand will drive commercialisation of energy and environmental technologies. 	<ul style="list-style-type: none"> Carbon regulation & legislation including targeted sector-specific initiatives. Must send clear and transparent signals of its strategic intentions to alter business planning and investment. Help to ensure market demand (through procurement). 	<ul style="list-style-type: none"> Can assist in terms of procurement (e.g. PSFPI). 	<ul style="list-style-type: none"> Develop grants for householders and businesses to incentivise uptake of products/services. E.g. for renewable energy Procure products/services to stimulate demand Provide access to information on low carbon products/services e.g. in libraries, free public seminars, etc
Policy & Regulatory Regime	<ul style="list-style-type: none"> No clear statement of government intentions 	<ul style="list-style-type: none"> If clear, policy will drive business planning decisions and investment and affect consumer demand. 	<ul style="list-style-type: none"> Ensure market demand (see procurement below) Create Markets for environmentally friendly attributes or credits. Provide extra financial backing Business development assistance. Action to incentivise and facilitate low carbon or other technologies. Co-ordination of policy at national, 	<ul style="list-style-type: none"> Region has role to play in co-ordinating action, particularly at the sectoral level. Development of LCEA be n the West Midlands 	<ul style="list-style-type: none"> Keep under review range of potential technologies which could be used by the council to reduce area's overall carbon emissions Liaise with regulatory bodies on issues where low carbon initiatives are hindered by current regulatory framework

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong **= Fairly Strong *= negligible)	
			regional & local level. • Low Carbon Economic Areas (LCEA).		
Public Procurement	• Government needs to lead by example.	• Purchasing power of public sector can help reduce risk of uncertainty over the scale of demand and price.	• Innovation Procurement Plans by Central Government • Small Business Research Initiative • Retrofit for the future. • Ultra Low Carbon Vehicles	** • Local/regional procurement (PSFPI). • Access some of the schemes at a regional level.	• Use public sector procurement to purchase low carbon products and services and where possible procure locally to stimulate sector
Physical & Institutional Infrastructure	• Inefficient and not conducive to low carbon activities	• Help drive business growth and sustainable transport.	• IT & Digital Infrastructure- universal broadband commitment. • Flexible intellectual property system. • Transformation of energy infrastructure. • Waste infrastructure. • Transport Infrastructure. Implement Carbon Reduction Strategy for Transport.	*** • High-quality low carbon employment land/premises. • Community energy generation initiatives. • Strategic regeneration • WIDP & WRAP to be utilised by local authorities. • Assist freight & logistics sector to adapt.	• Support development of low carbon infrastructure via long-term development plan for Local Authority including key infrastructure, e.g. waste, transport, energy
Skills	• Insufficient skills base to exploit business opportunities	• Competitive advantage to drive forwards low carbon products.	• Address shortage in many essential skills areas: Science, Technology, Engineering and Mathematics. • Communication, leadership and management skills.	*** • Work with sector skills councils. • Commission further research to understand specific job and skills	• Liaise with colleges within Local Authority area over development of stand-alone low carbon programmes or integration of low carbon into specific programmes

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong

				requirements of the opportunities.	
Planning Regime	<ul style="list-style-type: none"> Impede development of LCE, slowing delivery. 	<ul style="list-style-type: none"> Accelerate process, particularly in terms of supporting businesses seeking to improve energy efficiency 	<ul style="list-style-type: none"> Commitment that most new homes be zero carbon by 2016 relies on planning system not slowing down construction. 	** <ul style="list-style-type: none"> Regional Planning Bodies (integrated RES/RSS) 	<ul style="list-style-type: none"> Support development of low carbon infrastructure via long-term development plan for Local Authority including key infrastructure, e.g. waste, transport, energy, homes
Access to Research & Development	<ul style="list-style-type: none"> Low carbon R&D can give companies leading edge in low carbon sector 				<ul style="list-style-type: none"> Continue to support local companies with knowledge accessing universities. Raise awareness of low carbon research taking place to companies in the area Develop clusters in area to support development of LCE
Knowledge of LCE	<ul style="list-style-type: none"> Poor knowledge of low carbon opportunities may hamper development of LCE 		<ul style="list-style-type: none"> Continued provision of support services e.g. Carbon Trust, NISP, WRAP, etc 		<ul style="list-style-type: none"> Council could provide advice to businesses on different options for getting business support on carbon reduction. Or could consider developing own low carbon service in conjunction with other local authorities if appropriate. Raise awareness via business literature for local organisations

			Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong	
				**= Fairly Strong	
				*= negligible)	

The generic opportunities for each sector are provided in the Generic Profiles in Technical Report Section B. Table 9.2 below summarises the opportunities available to each sector within Solihull given the specific employment in that sector within Solihull (see above), the relevant clusters (see above), sector-specific opportunities (see Sector Profiles – Technical Report Section B) and key regulatory/policy drivers (see Section 10.2). The Table provides a summary of potential opportunities, possible barriers to those opportunities being achieved and potential interventions the council could take to support the development of a LCE for the particular sector. This information is based on both the regional study and interviews with individuals within the council. An assessment has also been made of the ease of implementation for each action identified for the Local Authority. The assessment is based on potential cost, time input required, technical considerations, likelihood of success.

Table 9.2 - Opportunities, Barriers and Suggested Local Authority Actions for Solihull

Sector	Opportunities for Sector within Sub-region	Barriers to Success within Sub-region	Local Authority Intervention Measures to Overcome Barriers	Ease to implement*
Construction	<ul style="list-style-type: none"> • Low carbon design and construction of buildings • Low carbon design of civil engineering projects • Low carbon techniques in electrics installation and other trades • Renovation of council and area housing stock using low carbon techniques 	<ul style="list-style-type: none"> • Consumer Demand • Value to provider • Perception of higher costs • Actual higher capital costs • Skills within sector • Lack of low carbon infrastructure • Availability and awareness of energy efficient equipment 	<ul style="list-style-type: none"> • Undertake publicity campaigns, seminars and breakfast meetings with local businesses to raise awareness of low carbon opportunities 	✓✓✓
			<ul style="list-style-type: none"> • Raise awareness of specific techniques and assessment methods e.g. BREEAM, Code for Sustainable Homes, CEEQUAL, etc 	✓✓✓
			<ul style="list-style-type: none"> • Support development of low carbon tools for the sector e.g. low carbon design tools 	✓✓
			<ul style="list-style-type: none"> • Generate case studies for local businesses e.g. low carbon building techniques 	✓✓✓
			<ul style="list-style-type: none"> • Ensure council funding and public procurement encourages low carbon methods and local delivery 	✓✓
			<ul style="list-style-type: none"> • Support training with Skills Council, particularly for lower skill roles within sector 	✓✓
			<ul style="list-style-type: none"> • Encourage companies to undertake carbon product label using PAS 2050 or engage in supply chain carbon programme e.g. Carbon Trust Standard or CEMARS 	✓✓

Manufacture of automotive and transport equipment	<ul style="list-style-type: none"> • Manufacturing of transport equipment (including supply chain) • Low carbon vehicle design e.g. internal combustion engine, hybrid and electric vehicles, fuel cell, innovative propulsion, new mobility concepts, thermo-electric generation, powertrain, re-engineered internal combustion engine, Brake energy regeneration, lightweight construction, efficient engine technologies, energy and heat management in the vehicle, recyclable vehicles, Intelligent Navigation Systems • Development of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO₂) • Decarbonisation of processes 	<ul style="list-style-type: none"> • Development and proof of technologies • Capital • Skills • Already invested in other vehicles • Infrastructure for fuels 	<ul style="list-style-type: none"> • Encourage companies supplying products directly to consumers to undertake carbon product label using PAS 2050 	✓✓
			<ul style="list-style-type: none"> • Engage with Low Carbon Economic Area for Advanced Automotive Engineering and Low Carbon Vehicles Technology Programme 	✓✓
			<ul style="list-style-type: none"> • Economic development initiatives – training in product development with Business Link and other stakeholders (e.g. Chambers of Commerce and local colleges) 	✓✓
			<ul style="list-style-type: none"> • Apply for European funding for grants to undertake training and consultancy to assist with new low carbon product development. Examples include <i>Ecoordinated</i> in Solihull 	✓
			<ul style="list-style-type: none"> • Undertake publicity campaigns, seminars and breakfast meetings to raise awareness of opportunities 	✓✓✓
			<ul style="list-style-type: none"> • Generate case studies for local businesses. 	✓✓✓
			<ul style="list-style-type: none"> • In general, support skills development 	✓✓✓
			<ul style="list-style-type: none"> • Encourage use of NISP, Carbon Trust, WRAP to make processes as efficient as possible 	✓✓✓
Manufacture of non-metallic mineral goods	<ul style="list-style-type: none"> • Reducing process CO₂ emissions related to cement manufacture 	<ul style="list-style-type: none"> • Consumer Demand • Value to provider • Perception of higher costs • Actual higher capital costs • Skills within sector 	<ul style="list-style-type: none"> • Apply for European funding for grants to undertake training and consultancy to assist with new low carbon product development. 	✓
			<ul style="list-style-type: none"> • Work with key companies to reduce carbon footprint using industrial support network (e.g. Carbon Trust, NISP, WRAP) 	✓✓

		<ul style="list-style-type: none"> • Lack of low carbon infrastructure • Availability and awareness of energy efficient equipment 	<ul style="list-style-type: none"> • Encourage use of best practice and support alternative fuel and material use options for cement production 	✓✓
			<ul style="list-style-type: none"> • Develop supportive planning and economic development policies to encourage production of sustainable products 	✓✓
			<ul style="list-style-type: none"> • Sponsor low carbon demonstration project for the construction sector (e.g. on a local authority construction project – lead by example) 	✓✓
Public services	<ul style="list-style-type: none"> • Ability to procure low carbon services for the sector • Decarbonisation of current products/services/buildings • Provision of low carbon education 	<ul style="list-style-type: none"> • Lack of training or understanding of approach for procurement sector • Ability to deliver by service providers • Budgetary constraints • Range of other priorities e.g. efficiency cuts, providing high performing services, etc 	<ul style="list-style-type: none"> • Set targets for reductions in carbon emissions from across the sector 	✓✓
			<ul style="list-style-type: none"> • Undertake strategic review of operations to determine possible ways to reduce carbon emissions for each element of the public services 	✓✓
			<ul style="list-style-type: none"> • Undertake internal publicity campaigns, seminars and breakfast meetings to raise awareness of low carbon opportunities 	✓✓✓
			<ul style="list-style-type: none"> • Provide guidance/support on sustainable/low carbon procurement for public sector and private sector 	✓✓✓
			<ul style="list-style-type: none"> • Consider how the local authority can directly influence the transition to a LCE through procurement and planning policies. This will include Highways and Transportation, Waste Management a, Education, Hospitals well as Social Services and other Community services. 	✓✓
			<ul style="list-style-type: none"> • Demonstrate best practice in own procurement and funding methods. 	✓✓
			<ul style="list-style-type: none"> • Generate case studies showing examples of low carbon initiatives. 	✓✓✓

Manufacture of metals and fabricated metal products and electrical equipment	<ul style="list-style-type: none"> Decarbonise current processes 	<ul style="list-style-type: none"> Lack of awareness Financing Incentives or regulation to encourage use Skills Lack of demonstration/pilot 	<ul style="list-style-type: none"> Encourage use of Carbon Trust, WRAP or council's own services to reduce carbon emissions and apply for Carbon Trust Standard or CEMARS supply chain standard 	✓✓
			<ul style="list-style-type: none"> For end-use products for consumers consider getting Carbon Footprint for product 	✓✓
Transport, storage and communications	<ul style="list-style-type: none"> Development of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO₂) for airport transport and air travel Use of low carbon aeroplanes Use of shared loading for cargo Use of low carbon vehicles and premises for storage and warehousing Provision of low carbon travel services e.g. carbon offsetting 	<ul style="list-style-type: none"> Infrastructure for fuels Capital Proven technology New designs needed at cost effective prices Manufacturers already invested in low efficiency products Lack of emissions regulation or method to calculate emissions via supply chain 	<ul style="list-style-type: none"> Encourage carbon labelling of aeroplanes and travel e.g. using PAS2050 or similar 	✓✓
			<ul style="list-style-type: none"> Encourage best practice discussions and networking between local companies on opportunities 	✓✓✓
			<ul style="list-style-type: none"> Develop/use consistent method for measuring and reporting on carbon emissions for the supply chain industry e.g. CEMARS 	✓✓
			<ul style="list-style-type: none"> Encourage the council's supply chain sector to engage on low carbon techniques 	✓✓
			<ul style="list-style-type: none"> Consider providing local authority-wide low carbon infrastructure, e.g. low carbon street lamps 	✓
Environmental goods and services	<ul style="list-style-type: none"> Provision of specialist advice to all sectors on low carbon 	<ul style="list-style-type: none"> Incentives or regulation to encourage use Skills 	<ul style="list-style-type: none"> Use local companies to provide low carbon support advice to businesses within area 	✓✓
			<ul style="list-style-type: none"> Support skills development 	✓✓
Manufacture of food and beverages	<ul style="list-style-type: none"> Decarbonisation of processes and supply chain Increased recycling of packaging from drink products, for example aluminium and glass bottles 	<ul style="list-style-type: none"> Re-use difficult to arrange Lack of awareness about decarbonising opportunities 	<ul style="list-style-type: none"> Work with WRAP to assist companies use less packaging and establish recycling system 	✓✓
			<ul style="list-style-type: none"> Consider use of PAS 2050 or supply chain carbon standard 	✓✓✓
			<ul style="list-style-type: none"> Provide advice to sector and if necessary access to capital funding 	✓

10. Opportunity & Regulatory Assessment

10.1 Opportunity Assessment

Each opportunity identified above has been assessed to determine the impact on jobs and how the particular opportunity supports meeting of carbon related drivers. For each Local Authority the relevance of the opportunity has been indicated. Relevance has been determined based on current employment in the sector, changes in employment in the sector, relevant specialisms and access to clusters in the area. The impact of each opportunity has then been assessed as either increasing, decreasing or stabilising job numbers within the area. Each opportunity has been assessed as to whether it would be beneficial to coordinate at a City Region based on the similarity of actions across the relevant Local Authorities, the scale of the opportunity and the likely ability to coordinate actions. Results for this are given in Table 10.1.

10.2 Key Drivers for Opportunities

Regulation is a key driver for the development of a LCE. As well as the high level UK Climate Change Act 2008 which sets long-term targets there are a range of regulations, financial incentives, initiatives and voluntary targets which aim to reduce carbon emissions. For each opportunity identified in the project, some of the key drivers specific to the opportunity have been identified in Table 10.2. In all cases the regulation or government initiatives support the opportunity being implemented. There are a substantial number of drivers which directly or indirectly underpin all opportunities; these include:

- UK Climate Change Programme
- UK Low Carbon Transition Plan
- Climate Change Act 2008
- Carbon Budgets Order, Carbon Accounting Regulations and associated legislation relating to carbon budgets
- EU Emissions Trading Schemes, Climate Change Levy and Climate Change Agreements
- Carbon Reduction Commitment Energy Efficiency Scheme (equivalent to a UK ETS)
- Low Carbon Industrial Strategy

It is worth noting that there are a variety of exemptions applicable for the various pieces of legislation but there may be instances whereby it may indirectly apply, e.g. CRC Energy Efficiency Scheme applies directly to larger organisations but may impact the supply chains, etc., resulting in an indirect impact upon SMEs.

Table 10.1 - Opportunity Assessment for Solihull and City Region

Sector	Opportunity	Solihull		City	
		Relevance	Impact	Relevance	Impact
Construction	• Low carbon design and construction for buildings e.g. BREEAM certified buildings for non-domestic sector	✓	↑	✓	H
	• Use of low carbon design for civil engineering e.g. CEEQUAL civil engineering projects	✓	↑	✓	H
	• Reuse of materials and use of recycled materials (also supports recycling sector)	✓	↔		
	• Low carbon renovation of LA council stock and wider city housing	✓	↑	✓	H
	• Provision of low carbon services and trades e.g. plumbing, insulation, electrics	✓	↑	✓	M
Manufacture of automotive and transport equipment	• Manufacturing of low carbon transport equipment (including supply chain)	✓	↑	✓	H
	• Low carbon vehicle design (e.g. Hybrid and electric vehicles; fuel cell; innovative propulsion; new mobility concepts; thermo-electric generation; re-engineered internal combustion engine; brake energy regeneration; lightweight construction; efficient engine technologies; energy and heat management in the vehicle; recyclable vehicles; Intelligent Navigation Systems).	✓	↑	✓	H
	• Development of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO ₂)	✓	↑	✓	H
Manufacture of non-metallic mineral goods	• Cost savings by use of more efficient (and low carbon) vehicles and equipment e.g. glass shaping machinery	✓	↔	✓	L
	• Use and development of low carbon products	✓	↔	✓	M
Public services	• Ability to procure low carbon services/products for the sector	✓	↑	✓	H
	• “Low Carbon” Education	✓	↔	✓	H
	• Use of planning to support development of LCE (transport, energy, waste management, etc)	✓	↑	✓	H
Manufacture of metals and fabricated metal products and electrical equipment	• Low carbon processes	✓	↔	✓	L

Sector	Opportunity	Solihull		City	
		Relevance	Impact	Relevance	Impact
Transport, storage and communications	• Shared loading for cargo	✓	↔		
	• Development/use of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO ₂)	✓	↑	✓	H

11. Summary

Of the eight key sectors of opportunity Solihull's highest employment areas are public services, transport, storage and communications and manufacture of metals, fabricated metal products and electrical equipment, however Solihull had strong levels of employment relative to the other City Region local authorities in most of the sectors, making its actions particularly important to the region as a whole. The largest change over the period 2003-2008 was the decline of the manufacture of motor vehicles. Key clusters specific to Solihull and already in place include Science City, the Energy Technologies Institute, Aston and Solihull University research programmes. Based on the ranking exercise key opportunities for Solihull were found to be construction, manufacture of motor vehicles and transport, manufacture of non-metallic goods and public services. Opportunities that were considered to have the potential to create jobs included the following:

- Construction: Low carbon design and construction ; Low carbon renovation of housing stock; Provision of low carbon construction services and trades
- Manufacture of Motor Vehicles: Manufacture of low carbon transport equipment; Low carbon vehicle design; Development of alternative fuels and infrastructure
- Transport, Storage & Communications: Development/use of alternative fuels and associated infrastructure
- Environmental Goods and Services: Provision of specialist advice to all sectors; Development of low carbon community energy companies

Low carbon procurement, the provision of low carbon education and planning to support the LCE development were all considered to be important public sector opportunities. Barriers were seen to include lack of access to entrepreneurial start-up money for new companies.
