Opportunities in the Low Carbon Economy

Telford & Wrekin

May 2010

Notice

This report was produced by Atkins for Telford & Wrekin Council for the specific purpose of providing research into the business opportunities for the local economies relating to the transition to a low carbon base.

This report may not be used by any person other than Telford & Wrekin Council without their express permission. In any event, Atkins accepts no liability for any costs, liabilities or losses arising as a result of the use of or reliance upon the contents of this report by any person other than Telford & Wrekin Council.

Document & Project Structure

In 2009 Advantage West Midlands commissioned Atkins to undertake a regional review of the development of a Low Carbon Economy. Following this piece of work the West Midlands' City Region Local Authorities commissioned Atkins to undertake a more detailed look at individual council areas. This report presents the "Telford & Wrekin Profile" which is one of eight profiles produced for individual Local Authorities in the City Region which provides information specific to Telford & Wrekin on opportunities for the development of a Low Carbon Economy. In addition to this report there are other reports of relevance, which include seven further Local Authority reports, the Technical Report, which contains the background data and the City Region Report which looks at opportunities which affect more than one Local Authority and therefore could be supported by the City Region.

Acknowledgements

This report has benefited from advice and input from individuals within Telford & Wrekin Council, the West Midlands Regional Observatory and the City Region.

Executive Summary

This report reviews the potential for the development of a Low Carbon Economy (LCE) in Telford & Wrekin. It follows on from a regional study commissioned by Advantage West Midlands and the West Midlands Regional Observatory in 2009 which identified eight key sectors that could play a key role in the delivery of a LCE across the West Midlands.

The 2009 high level review identified eight key sectors within the economy as providing low carbon opportunities based on the level of carbon regulation affecting the sector, the scale of opportunity, the existing regional strengths, existing regional action and availability of low carbon technologies. These sectors were: *manufacture of non-metallic mineral goods; manufacture of motor vehicles and transport; manufacture of metals, fabricated metal products and electrical equipment; construction; environmental goods and services; manufacture of food and beverages; transport, communication and storage, and; public services.* For each sector, key opportunities were identified and these focussed on decarbonising current products and services (such as replacing the use of a petrol vehicle to transport goods with a renewable vehicle), provision of low carbon products and services (such as freight delivery using rail), diversification into new low carbon products (such as manufacture of LEDs) or no opportunities being available. Examples of this include the manufacture of low carbon energy generation equipment by the “Metals” sector, the provision of low carbon buildings by the Construction sector and the use of more efficient equipment by the Non-Metallic Mineral Goods sectors. The study also identified a range of determining factors to the development of a LCE across the region. These included consumer demand, policy and regulatory regime, public procurement, physical and institutional infrastructure, skills and the planning regime. For each sector and for each determining factor a range of regional actions were identified.

This report identifies the key sectors of employment in Telford & Wrekin; key opportunities for Telford & Wrekin to protect or increase employment levels; any barriers relevant to Telford & Wrekin and suggested actions to take in order to overcome them. In addition, the report identifies City Region wide actions and initiatives which could be taken jointly by the local authorities as it is inevitable that these organisations will need to collaborate on these initiatives if they are to be successful.

The Telford & Wrekin profile was developed based on the following key inputs:

- *Economic Analysis:* Employment and business unit data to a 4 digit UK Standard Industrial Classification (SIC) of Economic Activities code level to understand the level of activity conducted by the eight key sectors operating within Telford & Wrekin. Changes in data over the five year period 2003 to 2008 have also been reviewed.
- *Sector Prioritisation:* Based on employment and business unit data and the previous study's ranking of the sectors, sectors have been prioritised with those sectors having the largest employment levels or highest number of business units and the most potential opportunities from the regional study being considered the highest priority.
- *Local Authority Interviews:* Interviews with one or more council officials from either the Economic Development and/or Climate Change teams to gain their view on the key opportunities, barriers, current actions and future potential actions to develop a LCE in their area.

Based on the information contained in each profile, a list of potential opportunities was developed in order to develop a LCE. Each opportunity has been assessed in terms of impact on jobs and for regulatory drivers.

The highest employment within the eight key sectors of opportunity area public services; manufacture of metals, fabricated metal products and electrical equipment; manufacture of motor vehicles and transport, and; transport, storage and communications. Telford & Wrekin had growth in transport, storage and communications; construction, and; public services over the period 2003-2008. Falls were experienced in the lower employment sectors of farming, food and drink and environmental goods and services.

Telford & Wrekin has a number of relevant clusters including being part of a technology corridor, an Environmental Technologies cluster “MetNet”, the provision of environmental support via Business Environmental Support Scheme for Telford (BESST) and nearby access to Harper Adams University College and Wolverhampton University. Based on the ranking exercise, key opportunities for Telford and Wrekin were found to be manufacture of motor vehicles and transport; construction, and; manufacture of materials and fabricated metal products. Opportunities that were assessed as having the potential to increase employment included:

- Construction: low carbon renovation of housing stock;
- Public Services: supporting the defence sector reducing their carbon footprint;
- Transport, Storage and Logistics: sustainable logistics and use of rail freight to boost the transport, storage and communications sector within the area; development of alternative fuels and infrastructure;
- Environmental goods and services: increased non-metal waste recycling; provision of advice on low carbon to businesses; development of low carbon community energy companies/schemes
- Manufacture of food and beverages: use of food waste to generate energy.

Low carbon procurement, the provision of low carbon education and planning to support the low carbon economy development were all considered to be important public sector opportunities. Barriers were seen to include a lack of a high technology/green business park and access to skills.

1. National & Regional Context

In December 2007, Advantage West Midlands produced a new Regional Economic Strategy for the West Midlands: *Connecting to Success*¹, endorsed by Jonathon Porritt, the then Chair of the UK Sustainable Development Commission. Hailed as a landmark strategy, *Connecting to Success* has been formally recognised as the UK's first low carbon economic strategy and has established Advantage West Midlands as a leader amongst the regions. The lessons from developing this strategy are featured in *Evidence of Success*².

The evidence base for this strategy helped to define for the first time what a low carbon economy is and what this meant to the West Midlands:

*"In the West Midlands a low carbon economy means an economy that will underpin a prosperous and thriving region through capturing the economic benefits of increasing efficiency whilst reducing direct carbon emissions and using the region's strengths in engineering, science and technology to deliver low carbon solutions to national and international markets. For **Business** this means fully capturing the opportunities for both existing industries and new enterprises to ensure the West Midlands region secures a reputation for profitable low carbon enterprise. For **People** this means up-skilling to secure the benefits from new employment opportunities emerging from a low carbon economy, along with behavioural change, to enhance quality of life. For **Place**, this means creating the conditions for growth by optimising transport networks and developing a low carbon built environment through energy efficiency and renewable materials".* (AWM, 2007).

The evidence base for the development of the strategy helped to set out what a low carbon economy strategy should look like and the type of interventions to generate the biggest productivity gains and carbon reductions. One of the actions within the strategy was to "help identify low carbon economic and climate impact opportunities and risks for regional business and skills needs".

The low carbon agenda has progressed considerably over the past few years as understanding and scientific evidence for climate change has received universal acceptance, internationally, nationally and locally. As a result of international negotiations and commitments, the UK Climate Change Act 2008 established a legally binding target of 80% carbon emissions reduction by 2050; a target which will require significant and coordinated action across all sectors of the economy. Following the Climate Change Act the UK Government launched the Low Carbon Transition Plan³ which sets out how the UK will meet the 34% reduction in emissions required by 2020 detailing actions for individual sectors of the economy. In parallel, a number of associated commitments have been made, all of which will need to be implemented at a local level. These include the following:

- More than 1.2 million people will be in green jobs.
- 7 million homes will have benefited from whole house makeovers, and more than 1.5 million households will be supported to produce their own clean energy.
- Around 40 percent of electricity will be from low-carbon sources, from renewables, nuclear and clean coal.

¹ Connecting to Success, Advantage West Midlands, 2007

² Evidence of Success, Advantage West Midlands, 2008

³ The UK Low Carbon Transition Plan, HMG, 2009

- We will be importing half the amount of gas that we otherwise would.
- The average new car will emit 40 percent less carbon than now.

In order to achieve these targets, the Government has and is continually developing legislation, policy, strategies, plans and schemes. These will be applicable nationally, regionally, locally and even for individuals, and will contribute cumulatively to meet the commitments established internationally and through the UK Low Carbon Transition Plan.

Regionally there have been a number of relevant developments, including:

- Commitments from individual Local Authorities, through initiatives such as the Nottingham Declaration, to reduce carbon emissions.
- The recent announcement of the Low Carbon Economic Area for advanced automotive engineering within the region⁴.

The economic opportunities arising from the shift to low carbon and the implications for business models extend across the West Midlands economy. Significant Government investments have already begun, and will continue on all scales, impacting upon the opportunities available to drive the economy.

The Carbon Trust report, *Climate Change - a Business Revolution*⁵ shows how tackling climate change can create opportunities for a company to increase its value by up to 80% if it is well positioned and proactive. Conversely, it could threaten up to 65% of its value if a company is poorly positioned or a laggard.

Opportunities and risks in the economy are driven by shifts in consumer behaviour, technology and innovation and regulation. Targeted policies and support measures are therefore required as a key initiator of change across the West Midlands economy.

The first report in this study reviewed opportunities for the development of a Low Carbon Economy across the region. This study looks at opportunities for the development of a Low Carbon Economy within individual Local Authorities within the City Region as well as the City Region as a whole.

2. Introduction

In 2009, Atkins carried out research on behalf of AWM and West Midlands Regional Observatory (WMRO) to investigate the opportunities and barriers to the growth of a Low Carbon Economy (LCE) across the West Midlands region. This initial, high-level and region-wide research provided a broad indication of how well the business sectors within the West Midlands Economy are positioned to embrace the opportunities and risks associated with transition to a LCE.

The initial study was well received by WMRO and the group subsequently decided that more detailed research would be beneficial. The new study would assist decision makers at the local authority level, particularly those in the City Region, including Telford & Wrekin.

This report provides a more detailed review for Telford & Wrekin. It includes:

- More detailed economic data for employment and businesses specific to Telford & Wrekin
- Input from interviews with Telford & Wrekin officials
- Clusters relevant to Telford & Wrekin which may support the development of a Low Carbon Economy
- Barriers specific to Telford & Wrekin which may prevent opportunities being achieved
- Identification of opportunities relevant to Telford & Wrekin along with suggested actions
- An assessment of the opportunities for Telford & Wrekin in terms of supporting employment and meeting carbon regulation

A profile has also been generated for the City Region as a whole using City Region economic data and findings for each of the Local Authorities. This is relevant to Telford & Wrekin as opportunities and barriers have been identified which affect more than one Local Authority and suggested actions may be relevant to Telford & Wrekin.

3. Previous Relevant Studies

The key outputs from the previous regional studies are summarised below and key outputs have been included in Technical Report Section A and B of this report as noted below. The following has been taken from a URS study into the Low Carbon Evidence Base for the West Midlands Regional Observatory Economic Strategy (2007):

Sector Exposure: The level of exposure to climate change related regulatory change for key sectors was identified as being high, medium or low risk. The potential exposures for sectors were assessed for both products and services and for operations (see Table A1 in Technical Report Section A)

Local Authority Exposure: The level of exposure to climate change related regulatory change for Telford & Wrekin was identified. This identified both the percentage of employees and businesses at high risk of being affected by carbon reduction policies (see Table A2 in Technical Report Section A).

The following has been taken from the Atkins 2009 Regional Low Carbon Economy study:

Sectors: Individual business numbers and people employed across all sectors for the West Midlands were analysed (see Table A3 in Technical Report Section A). Eleven sectors were identified as currently making a large contribution to the West Midlands economy (in terms of employment and business size). These are identified below:

- Business Services (including finance & insurance)
- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Motor Vehicles and Transport equipment
- Manufacture of Metals, Machinery & Equipment and Electrical Equipment
- Manufacture of Non-Metallic Mineral Products (glass & ceramics).
- Public Sector Services (incorporating, Education, Health & social work and Public administration & defence)
- Tourism & Leisure (incorporating Hotels & Restaurants and elements of Other Community services)
- Transport, Storage & Communications
- Wholesale & Retail Trade

Low Carbon Opportunities: Specific low carbon opportunities were identified for each of the employment sectors identified, (see generic opportunity profiles in Technical Report Section B). The objective of this analysis was to show how organisations can reduce carbon across their operations, products and services, and therefore give an indication of how regional and local bodies can focus their efforts to assist the strategic shift to a Low Carbon Economy. The generic profiles also summarise regional activity and opportunities in these sectors and also relationships between the sectors.

The regional study identified key sectors which present the greatest opportunity in terms of development of a Low Carbon Economy to the region. Using the following criteria: (i) Carbon Regulation and policy encouraging the development of a Low Carbon Economy in the sector, (ii) the Scale of Opportunity for the particular sector based on size of the sector, (iii) Existing Regional Strengths relevant to the sector, (iv) Existing Regional Action relevant to the sector, (v) Low Carbon Technologies available for the sector an evaluation was undertaken of the 11 key sectors to determine where the best opportunities for future growth lie. A simple scoring methodology was used to qualitatively evaluate these opportunities on the following basis: (H: High opportunity (3);

M: Medium opportunity (2); L: Low opportunity (1)). These scores were then summed across the above criteria for each of the above 11 sectors. The results of this evaluation are outlined in Table A4 in Technical Report Section A. The eight sectors identified as providing the most opportunity in the region were identified as follows:

- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Metals, Fabricated Metal Products and Electrical Equipment
- Manufacture of Motor Vehicles and Transport
- Manufacture of Non-Metallic Mineral Goods
- Public Services
- Transport, Storage and Communication.

Barriers and Potential Interventions: Table A5 in Technical Report Section A summarises the key factors with the potential to constrain and/or drive the development of a LCE in the region along with potential government interventions to assist and possible areas of regional influence.

Sector Wide Opportunities, Barriers and Regional Solutions: Table A6 in Technical Report Section A summarises for each sector the key opportunities for the sector, the potential barriers and regional solutions which may be available plus an indication of whether the suggested actions are short-term, medium-term or long-term.

4. Project Aims & Intended Audience

4.1 Project Aims

The overall objective of this project is to give each City Region Local Authority more detailed information to support the strategic planning for the LCE within their Authority. In summary the main aims for Telford & Wrekin are:

- To understand key employment in Telford & Wrekin
- To identify key opportunities for Telford & Wrekin to protect or increase employment
- To identify any barriers and key actions for Telford & Wrekin to support the development of a LCE
- To determine which actions across the City Region can be undertaken in collaboration by the City Region and Local Authorities

4.2 Intended Audience

The findings of this part of the study are directed towards officials working within the Local Authority, plus the City Region, the West Midlands Regional Observatory and Advantage West Midlands. In addition there are a range of other stakeholders to whom this project will be of interest including business support organisations and public and private sector organisations. Each of these stakeholders will need to identify and consider their role in the delivery of the LCE, both individually and in partnership with other stakeholders. However, a summary is outlined below of how each of the principle stakeholders could use this report to assist the strategic shift to a LCE:

- **Sub-regional policy makers** – to understand the implications and actions required within local economic assessments and strategies to deliver a lower carbon economy through planning control and land-use policies.
- **Business support organisations** – to understand the drivers, opportunities and interventions required to assist the transition to a LCE.
- **Individual public and private sector organisations** – to understand and develop the opportunities for their sector.

5. Project Methodology

The delivery of this project has been divided into a number of elements.

Economic Analysis

Using the eight key sectors identified in the initial study analysis of both employment and business unit to a 4 digit UK Standard Industrial Classification of Economic Activities (SIC) code level has been undertaken using 2008 data available on NOMIS for each Local Authority. This provides detailed information for Telford & Wrekin on exactly what type of activity is taking place within their area. For the employment analysis the Annual Business Inquiry (ABI) Employee Analysis data available on NOMIS was used, which is an employer survey of the number of jobs held by employees. The NOMIS survey records a job at the location of an employee's workplace. For the Business Unit analysis the Annual Business Inquiry (ABI) Workplace Analysis data available on NOMIS was used, which is a survey of the number of workplaces in an area. The data is presented using the following broad categories:

- Construction
- Environmental Goods and Services
- Farming, Food and Drink
- Manufacture of Metals, Fabricated Metal Products and Electrical Equipment
- Manufacture of Motor Vehicles and Transport
- Manufacture of Non-Metallic Mineral Goods
- Public Services
- Transport, Communication and Storage

The output of this analysis is provided in below and supporting data is provided in Technical Report Section C (for business unit data), Technical Report Section D (for employment data) and Technical Report Section E (sectoral change over the period 2003 to 2008). Please note data provided in this report has been rounded to the nearest 100 (unless <100) for employment figures and the nearest 10 for business units, as recommended by the Office of National Statistics.

Identification of key sectors of opportunity for each Local Authority

The eight key sectors this study focuses on have been selected based on the work undertaken at a regional level as part of the 2009 AWM Regional Study undertaken by Atkins. This study has been reviewed and tested by a number of regional groups and has been well received. In order to identify which of these sectors provide the most opportunity for development of a LCE in Telford & Wrekin the following elements have been ranked to provide key sectors of focus for Telford & Wrekin:

- Telford & Wrekin's employment data (both number of jobs and number of businesses)
- Sectoral opportunities based on the regional study (reproduced as Table A4 in Technical Report Section A)

The key sectors with opportunities in the LCE are reported in section 8 below.

Interviews/workshops within each Local Authority

A structured interview was undertaken with one of more officials of the Local Authority's Economic Development Department and/or Climate Change/Environmental Department. The interview was intended to capture the officials' views on the following key areas:

- Review of Telford & Wrekin's key sector opportunities
- Review of barriers for each sector and general barriers
- Identification of key geographical clusters within Telford & Wrekin

- Identification of potential policy interventions and recommendations

The results of the interview has been utilised in the in the development of this report and a summary of the interview is provided in Technical Report Section F.

Development of Telford & Wrekin's Profile

Using the information gathered above, a Profile was developed for Telford & Wrekin. This profile contains a summary of key information relevant to Telford & Wrekin, as follows:

- A prioritised set of key sectors
- A set of specific opportunities for Telford & Wrekin.
- Relevant geographical clusters
- Any specific barriers for Telford & Wrekin
- Potential policy interventions or other recommendations

Assessment of opportunities

Opportunities have been assessed for impact on jobs and in meeting carbon legislation.

Jobs: Taking each of the key opportunities identified for Telford & Wrekin, as discussed above, the impact of implementation on jobs within the area has been assessed. For example, if the only opportunities available were simply to meet regulation as implemented, this may lead to a continuing to diminish workforce, whereas if the sector could be the first in the UK to patent a low carbon technology this could dramatically increase the workforce. For opportunities that have the potential to significantly contribute to an increase in employment levels (i.e. greater than 10% growth within that sector for a particular region) they have been identified as being of regional significance. It is stressed that the ability to predict employment growth is, by its nature, imprecise and dependent upon a number of variables. We must emphasise, therefore, that our estimates are, at best, indications of opportunities with the potential to increase employment. They do not constitute a guaranteed or reliable estimate of employment levels in these sectors in the future.

Regulatory and other key drivers: Each opportunity has been assessed for the impact of the opportunities on meeting carbon legislation and other relevant key Governmental drivers, such as the Climate Change Act, Carbon Budget Orders, Emissions Trading, the Carbon Reduction Commitment the Renewable Transport Fuel Obligation, the Environmental Transformation Fund, etc.

City Region-wide Opportunities: The relevance of each opportunity has been considered for each Local Authority and where an opportunity is relevant to a number of Local Authorities and a joint approach is considered beneficial this opportunity has been determined as a City Region opportunity.

The opportunity assessments are provided in Section 10 and a summary of key regulatory and policy drivers is provided in Technical Report Section G.

6. Local Authority Context

Telford and Wrekin Council has committed to reduce annual carbon dioxide emissions by 60% from 1990 levels by 2050 (36% by 2026) with an interim target to reduce 'per resident' emissions from 7.9 tonnes/person by 5% by 2010/11. Telford and Wrekin Council are signatories of the Nottingham Declaration on Climate Change.

Taking into account the opinions of over 400 residents and local organisations, the Council has developed a Climate Change Strategy⁶ and action plan (2008 – 2011). The guiding principles of the Strategy are:

- Developing skills and technologies for a future LCE
- Ensuring practical actions with long lasting effects
- Building knowledge through awareness raising
- Contributing to regional and national targets for reducing CO2
- Leading by example and inspiring the community
- Taking account of Telford and Wrekin's planned growth
- Securing resources to enable continuing actions
- Developing actions through local partnerships
- Taking action on Council-owned/managed buildings, transport and service provisions

The Council has taken measures to reduce carbon emissions including:

- Installing a power management system at our The Civic Offices
- Putting in energy efficient lighting throughout Darby House
- Fitting covers at seven swimming pools

Figure 6.1 sets out the employment by sector in the conurbation of Telford & Wrekin based on the NOMIS survey data compared to the rest of the City Region. Public services are an important sector in Telford and Wrekin, accounting for 56%. Manufacturing is also important accounting for over a quarter (27%) of employment for the area based on the sectors listed.

Figure 6.2 shows the relative employment within the eight key sectors compared to the City Region and West Midlands as a whole. Manufacture of Motor Vehicles, Manufacture of Non-metallic Goods and Manufacture of Metals are all strong relative to the rest of the area.

Figure 6.1 – Telford & Wrekin's employment in the eight key sectors of low carbon opportunity compared to the rest of the City Region

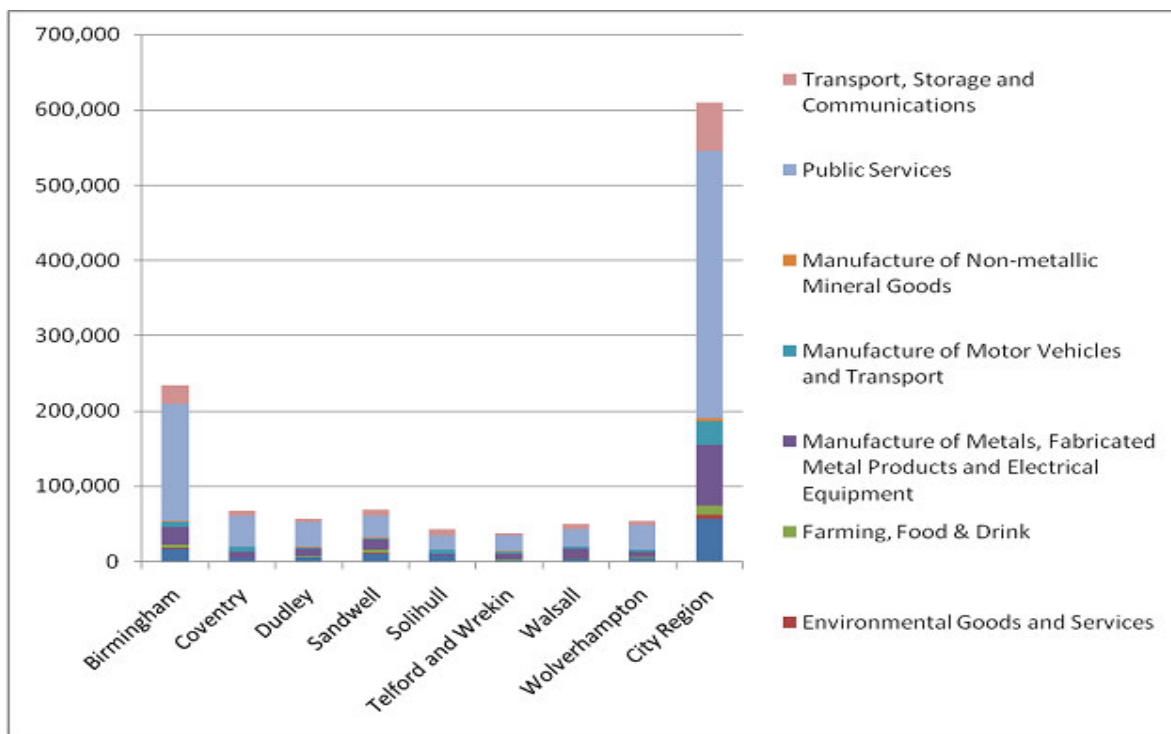

Figure 6.2 - Relative employment for eight key low carbon sectors in Telford & Wrekin

The Annual Business Inquiry analysis which looks in depth at particular strengths within each of these sectors found specific specialism in the areas shown in Table 6.1 below.

Table 6.1 - Key Sub-sector Specialisms within Telford & Wrekin for Employment and Businesses (based on 2008 data)

Sector	Relative strengths compared to rest of City Region	Largest Employment Subsectors (by number)	Largest Business No. Subsectors
Manufacture of motor vehicles and transport	Strong in parts and accessories for motor vehicles	(Limited statistics available) Manufacture of parts and accessories for motor vehicles and their engines (3,200) Manufacture of bodies (coachwork) for motor vehicles: manufacture of trailers and semi-trailers (100) Manufacture of motor vehicles (30)	No detailed statistics available.
Construction	Medium in renting of construction or demolition equipment; demolition/wrecking/earthworks; construction of water projects	General construction of buildings and civil engineering works (600) Installation of electrical wiring and fittings (400) Painting and glazing (200)	General construction of buildings and civil engineering works (100) Installation of electrical wiring and fittings (70) Plumbing (60)
Manufacture of Materials and Fabricated Metal Products	Strong in non-electric domestic appliances; office machinery; machinery for paper and paperboard production; portable hand-held power tools; electronic valves and tubes; cast iron tubes; computers and other information processing equipment; accumulators, primary cells and primary batteries. Medium in light metal packaging; weapons and ammunition	(Limited statistics available) Manufacture of office machinery (800) Manufacture of television and radio transmitters and apparatus for line telephony and line telegraphy (700) Manufacture of non-electric domestic appliances (600)	(Limited statistics available) General mechanical engineering (40) Manufacture of other fabricated metal products not elsewhere classified (30) Manufacture of tools (10)
Manufacture of Non-Metallic Goods	Strong in concrete products for construction purposes; ceramic sanitary fixtures; ceramic insulators; bricks, tiles and construction products in baked clay; ceramic insulators	(Limited statistics available) Manufacture of bricks, tiles and construction products, in baked clay (200) Manufacture of concrete products for construction purposes (200) Manufacture and processing of other glass including technical glassware (10)	No detailed statistics available.
Public Services	Strong in defence activities. Medium in veterinary activities; defence activities; supporting services for	General (overall) public service activities (3,000) Primary education (2,800) Defence activities (2,700)	(Limited statistics available) Social work activities without accommodation (100)

Sector	Relative strengths compared to rest of City Region	Largest Employment Subsectors (by number)	Largest Business No. Subsectors
	government as a whole		Primary education (70) Social work activities with accommodation (70)
Transport, Storage & Communications	Strong in freight transport by road, courier activities, storage and warehousing, transport via railways and transport via pipelines.	(Limited statistics available) Transport via pipelines (1000) Transport via railways (800) Other scheduled passenger land transport (400)	(Limited statistics available) Freight transport by road (200) Courier activities other than national post activities (30) Other passenger land transport (30)
Environmental Goods and Services	Limited employment, with exception of recycling of non-metal waste	Manufacture of electricity distribution and control apparatus (200) Manufacture of electric motors, generators and transformers (40) Recycling of non-metal waste and scrap (40)	No detailed statistics available.
Farming Food and Drink	Strong in manufacture of sugar; condiments/seasoning, processing and preserving of potatoes; manufacture of prepared feeds for farm animals; operation of dairies and cheese making. Medium in production and preserving of meat;	(Limited statistics available) Manufacture of cocoa, chocolate and sugar confectionery (400) Operation of dairies and cheese making (200) Manufacture of condiments and seasonings (100)	No detailed statistics available.

Three sectors in Telford and Wrekin experienced growth in employment over the period 2003 to 2008, these include:

- Transport (34%);
- Construction (14%); and,
- Public service (22%).

Interestingly growth in the public service sector employment in Telford and Wrekin is the largest of all the eight Local Authorities.

The farming, food and drink sector accounts for just 2% of employment the sector experienced a - 56% reduction in employment from 2003 to 2008. Similarly employment in the environmental goods and services sector fell by- 43% over the same period.

7. Clusters

Clusters or networks of research, similar company types, networks, etc can help facilitate the development of a LCE. The following clusters have been identified as already in place within the area:

- Telford is located at the end of a **technology corridor**, which runs along the M54
- **Telford Business Partnership (TBP)** - A membership organisation exclusively for companies operating in the Business and Professional Services sector. With over 120 members
- **Business Development Centre** – 88 units let on a flexible tenancy agreement to help and encourage the formation and growth of new small businesses.
- **West Midlands Manufacturing Advisory Service** – assists manufacturing businesses in the region as they strive to become fit for the future.
- The West Midlands being designated as a “**Low Carbon Economic Area**” for **Advanced Automotive Engineering**
- **Business Link West Midlands** - “Grant finder” and business support services
- **MetNet** – Environmental Technologies cluster in Shrewsbury – covering whole of Shropshire, Hereford and Worcester
- **Shropshire and Staffordshire Renewables** – offers grants. Due to be superseded by Re-think Energy (covers 6 LAs, funded by AWM & Europe). Training to diversify skills into LCE e.g. plumbers to solar; in order to develop a local supply chain, before hopefully developing wider business opportunities
- **Business Environmental Support Scheme for Telford (BESST)**. Led by the LA and considered to be the strongest business network in the region. Keeps businesses up to date on environmental legislation; resource efficiency; raises awareness of organisations such as NISP, WRAP and Envirowise, EA, plus other partners
- **Harper Adams University College**. Harper Adams University College⁷ - has installed a number of technology showcases on the college site which has helped assist over 4,000 visitors gain greater knowledge and understanding about environmental technologies. Harper Adams also works closely with rural businesses to present diversification opportunities, develop skills and expertise and disseminate knowledge in the field of environmental technologies. It also delivers the AWM Telford & Wrekin Science City funded Bioenergy West Midlands Initiative that aims to promote bioenergy in the West Midlands.
- **University of Wolverhampton**. Whilst this university is not within the area it could be used for a wide range of training
- **West Midlands Centre for Constructing Excellence (West Midlands Centre for Constructing Excellence)**. The West Midlands Centre for Constructing Excellence provides specialist business improvement assistance specifically to help local businesses in the construction and building technologies sectors. Eligible businesses in the West Midlands can benefit from subsidised, or in some cases fully-funded, business improvement services.
- **National Industrial Symbiosis Programme (NISP)** NISP has been operating in the West Midlands since 2003. NISP uses industrial symbiosis to identify sustainable resource management solutions for businesses. Its main aim is to help businesses improve resource efficiency and reduce waste. Industrial symbiosis engages traditionally separate industries

with the aim of improving cross industry resource efficiency through the commercial trading of materials, energy and water and sharing assets, logistics and expertise.

- **Agri-technology research** at research centres such as Harper Adams. There could be scope for the research and science ideas coming forward from the research base to be exploited by firms within the agri-technology sector.
- **A range of national and regional clusters** with a sector specific focus, including those led by Advantage West Midlands and the Carbon Trust. More details are given in the generic profiles in the Technical Report, Section B.

8. Opportunities

In order to identify which of the sectors provide the most opportunity for development of a LCE within Telford & Wrekin the following have been ranked to provide key sectors of focus:

- Local Authority employment data (both number of jobs and number of businesses) for 2008 taken from the relevant ABI reports
- Sectoral opportunities based on the findings of the Regional study (as presented in Table A4 of Technical Report Section A)

Table 8.1 below shows the outcome of the ranking exercise for Telford & Wrekin (the lower the overall ranking the higher the opportunity has been calculated to be for that particular sector).. The sectors showing the largest opportunities based on the regional study and employment and business numbers within the Telford & Wrekin area are manufacturing of motor vehicles and transport, construction and manufacturing of materials and fabricated metal products.

Table 8.1 - Ranking of Sectors for Low Carbon Opportunities for Telford & Wrekin

Sector	Opportunity Ranking	Employment Ranking	No. of Businesses Ranking	Overall Ranking (=A+(B+C)/2)
Manufacture of Motor Vehicles and Transport	1 (15)	3 (3406)	3* Not disclosed	4
Construction	3 (14)	5 (2145)	1 (525)	6
Manufacture of Materials and Fabricated Metal Products	3 (14)	2 (6580)	5 (226)	6.5
Manufacture of Non-Metallic Goods	1 (15)	7 (479)	7* Not disclosed	8
Public Services	7 (12)	1 (21,279)	2 (523)	8.5
Transport, Storage & Communications	7 (12)	4 (3011)	4 (308)	11
Environmental Goods and Services	3 (14)	8 (318)	8* Not disclosed	11
Farming Food and Drink	6 (13)*	6 (770)	6* Not disclosed	12

These sectors are considered to be attractive to Telford & Wrekin for the following reasons:

- **Manufacture of Motor Vehicles and Transport:** Telford & Wrekin's key strength in this area is the manufacture of parts and accessories for motor vehicles and their engines. The industry faces international competition therefore decarbonising the sector is important, as production of low carbon products throughout the supply chain (e.g. lightweight materials, low waste, and low energy materials) to reduce the overall carbon footprint of vehicles produced.
- **Construction:** Telford & Wrekin has fairly limited employment across the construction sector, with the exceptions of general construction of buildings and renting of construction or demolition equipment. Regulatory pressure to reduce carbon emissions associated with building construction provide opportunity to the sector and employers in the rental sector could consider provision of low carbon construction or demolition equipment (e.g. Electric vehicles, alternative fuel vehicles, etc).
- **Manufacture of Materials and Fabricated Metal Products:** Telford & Wrekin has lower employment relative to the rest of the city region across most of this sector, however it does have particular strengths in a range of specific sub-sectors, e.g. non-electric domestic appliances; office machinery; machinery for paper and paperboard production; portable hand-held power tools; electronic valves and tubes; cast iron tubes; computers and other information processing equipment; accumulators, primary cells and primary batteries. There are two key pressures on this sector. Firstly increased energy costs and therefore opportunities are in the form of lean manufacturing for the sector to retain competitiveness and reduce carbon emissions. Secondly in the carbon emissions related to the end use of the products produced, which could provide an opportunity for re-design of the products to reduce their carbon impact.

9. Barriers

Table 9.1 below summarises the general barriers identified for the Telford & Wrekin Council area in the development of a LCE. These are based on the interview with Telford & Wrekin Council plus those relevant which were identified during the regional study (shown in Table A5, Technical Report Section A).

Table 9.1 - Summary of Region-wide and Telford & Wrekin Specific Barriers to the Development of a LCE

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong	
				**= Fairly Strong	
				*= negligible)	
Consumer Demand	<ul style="list-style-type: none"> Consumers will not pay a premium purely for greener products. Lack of incentives for businesses and consumers to move to low carbon products/ services 	<ul style="list-style-type: none"> Sufficient market demand will drive commercialisation of energy and environmental technologies. 	<ul style="list-style-type: none"> Carbon regulation & legislation including targeted sector-specific initiatives. Must send clear and transparent signals of its strategic intentions to alter business planning and investment. Help to ensure market demand (through procurement). 	<ul style="list-style-type: none"> * Can assist in terms of procurement (e.g. PSFPI). 	<ul style="list-style-type: none"> Develop grants for householders and businesses to incentivise uptake of products/services. E.g. for renewable energy Procure products/services to stimulate demand Provide access to information on low carbon products/services e.g. in libraries, free public seminars, etc
Policy & Regulatory Regime	<ul style="list-style-type: none"> No clear statement of government intentions 	<ul style="list-style-type: none"> If clear, policy will drive business planning decisions and investment and affect consumer demand. 	<ul style="list-style-type: none"> Ensure market demand (see procurement below) Create Markets for environmentally friendly attributes or credits. Provide extra financial backing Business development assistance. Action to incentivise and facilitate low carbon or other technologies. Co-ordination of policy at national, 	<ul style="list-style-type: none"> * Region has role to play in co-ordinating action, particularly at the sectoral level. Development of LCEA be n the West Midlands 	<ul style="list-style-type: none"> Keep under review range of potential technologies which could be used by the council to reduce area's overall carbon emissions Liaise with regulatory bodies on issues where low carbon initiatives are hindered by current

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong	
				**= Fairly Strong	
				*= negligible)	
			regional & local level. • Low Carbon Economic Areas (LCEA).		regulatory framework
Public Procurement	• Government needs to lead by example.	• Purchasing power of public sector can help reduce risk of uncertainty over the scale of demand and price.	• Innovation Procurement Plans by Central Government • Small Business Research Initiative • Retrofit for the future. • Ultra Low Carbon Vehicles	** • Local/regional procurement (PSFPI). • Access some of the schemes at a regional level.	• Use public sector procurement to purchase low carbon products and services and where possible procure locally to stimulate sector
Physical & Institutional Infrastructure	• Inefficient and not conducive to low carbon activities	• Help drive business growth and sustainable transport.	• IT & Digital Infrastructure- universal broadband commitment. • Flexible intellectual property system. • Transformation of energy infrastructure. • Waste infrastructure. • Transport Infrastructure. Implement Carbon Reduction Strategy for Transport.	*** • High-quality low carbon employment land/premises. • Community energy generation initiatives. • Strategic regeneration • WIDP & WRAP to be utilised by local authorities. • Assist freight & logistics sector to adapt.	• Support development of low carbon infrastructure via long-term development plan for Local Authority including key infrastructure, e.g. waste, transport, energy
Skills	• Insufficient skills base to exploit business opportunities	• Competitive advantage to drive forwards low carbon products.	• Address shortage in many essential skills areas: Science, Technology, Engineering and Mathematics. • Communication, leadership and management skills.	*** • Work with sector skills councils. • Commission further research to understand specific job and skills requirements of the opportunities.	• Liaise with university and colleges within Local Authority area over development of stand-alone low carbon programmes or integration of low carbon into specific programmes

Factor	Potential to Constrain LCE Transition	Potential to Drive LCE Transition	Possible Government Interventions to Assist	Regional Influence	Local Authority Influence
				(*** = Very Strong	
				**= Fairly Strong	
				*= negligible)	
Planning Regime	<ul style="list-style-type: none"> Impede development of LCE, slowing delivery. 	<ul style="list-style-type: none"> Accelerate process, particularly in terms of supporting businesses seeking to improve energy efficiency 	<ul style="list-style-type: none"> Commitment that most new homes be zero carbon by 2016 relies on planning system not slowing down construction. 	** <ul style="list-style-type: none"> Regional Planning Bodies (integrated RES/RSS) 	<ul style="list-style-type: none"> Support development of low carbon infrastructure via long-term development plan for Local Authority including key infrastructure, e.g. waste, transport, energy, homes
Lack of entrepreneurial start up money available to companies	<ul style="list-style-type: none"> Lack of low carbon focussed companies will reduce level of low carbon products/ services available 	<ul style="list-style-type: none"> Establishment of base of low carbon companies may lead to cluster of companies forming leading to employment in the area 	<ul style="list-style-type: none"> Establishment and development of low carbon grants/funds e.g. Carbon Trust Incubator 	<ul style="list-style-type: none"> Provide focussed grants/funds for regional development of low carbon organisations 	<ul style="list-style-type: none"> Offer directly or encourage third parties to offer businesses grants/loans to incentivise development of LCE
Access to capital for Local Authority	<ul style="list-style-type: none"> Budget constraints may limit development 		<ul style="list-style-type: none"> Ring-fence money for low carbon investment 		<ul style="list-style-type: none"> Use and work with free national agencies, such as the Carbon Trust, WRAP, NISP, Energy Saving Trust Work in collaboration with other LA's in area (e.g. via City Region or other bespoke arrangements)
Competition	<ul style="list-style-type: none"> Global design and manufacturing economy may reduce Coventry's ability to compete 				<ul style="list-style-type: none"> Formalise international low carbon links Engage strategically with larger companies in area Use current and proposed clusters to support development of key sectors

The generic opportunities for each sector are provided in the Generic Profiles in Technical Report Section B. Table 9.2 below summarises the opportunities available to each sector within Telford & Wrekin given the specific employment in that sector within Telford & Wrekin (see above), the relevant clusters (see above), sector-specific opportunities (see Sector Profiles – Technical Report Section B) and key regulatory/policy drivers (see Section 10.2). The Table provides a summary of potential opportunities, possible barriers to those opportunities being achieved and potential interventions the council could take to support the development of a LCE for the particular sector. This information is based on both the regional study and interviews with individuals within the council. An assessment has also been made of the ease of implementation for each action identified for the Local Authority. The assessment is based on potential cost, time input required, technical considerations, likelihood of success.

Table 9.2 - Opportunities, Barriers and Suggested Local Authority Actions for Telford & Wrekin

Sector	Opportunities for Sector within Sub-region	Barriers to Success within Sub-region	Local Authority Intervention Measures to Overcome Barriers	Ease to implement*
Manufacture of automotive and transport equipment	<ul style="list-style-type: none"> Manufacturing of low carbon transport equipment (including supply chain) Low carbon vehicle design e.g. efficient engine technologies Development of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO₂) Reducing carbon emissions associated with current processes 	<ul style="list-style-type: none"> Development and proof of technologies Capital Skills Already invested in other vehicles Infrastructure for fuels 	<ul style="list-style-type: none"> Engage with Low Carbon Economic Area for Advanced Automotive Engineering and Low Carbon Vehicles Technology Programme 	✓✓
			<ul style="list-style-type: none"> Economic development initiatives – training in product development with Business Link and other stakeholders (e.g. Chambers of Commerce and local colleges) 	✓✓
			<ul style="list-style-type: none"> Apply for European funding for grants to undertake training and consultancy to assist with new low carbon product development. Examples include <i>Ecoordinated</i> in Telford & Wrekin 	✓
			<ul style="list-style-type: none"> Undertake publicity campaigns, seminars and breakfast meetings to raise awareness of opportunities and to stimulate discussion within sector 	✓✓✓
			<ul style="list-style-type: none"> Generate case studies for local businesses. 	✓✓✓
			<ul style="list-style-type: none"> In general, support skills development 	✓✓
			<ul style="list-style-type: none"> Encourage use of NISP, Carbon Trust, WRAP to make processes as efficient as possible 	✓✓✓
Construction	<ul style="list-style-type: none"> Use low carbon techniques and products in construction 	<ul style="list-style-type: none"> Consumer Demand 	<ul style="list-style-type: none"> Procure low carbon services from sector for refurbishment of council owned properties 	✓✓

Sector	Opportunities for Sector within Sub-region	Barriers to Success within Sub-region	Local Authority Intervention Measures to Overcome Barriers	Ease to implement*
	<ul style="list-style-type: none"> Provision of low carbon equipment (e.g. equipment which uses low carbon fuels or supports low carbon activities e.g. insulation, solar panel installation, etc) 	<ul style="list-style-type: none"> Value to provider Perception of higher costs Actual higher capital costs Skills within sector 	<ul style="list-style-type: none"> Provide grants if available to retrofit non-council properties and thereby stimulate sector Work with rental companies and provide information on best practice for low carbon equipment in construction sector 	<ul style="list-style-type: none"> ✓ ✓✓
	<ul style="list-style-type: none"> Low carbon refurbishment of housing stock (both council and privately owned) 	<ul style="list-style-type: none"> Lack of low carbon infrastructure Availability and awareness of energy efficient equipment 	<ul style="list-style-type: none"> Apply for European funding for grants to undertake training and consultancy to assist with new low carbon product development. Undertake publicity campaigns, seminars and breakfast meetings with local businesses to raise awareness of low carbon opportunities Support development of low carbon tools for the sector Generate case studies for local businesses Ensure council funding and public procurement encourages low carbon methods Support training with Skills Council Develop Local Authority network of suppliers, buyers and recyclers locally (e.g. via NISP) 	<ul style="list-style-type: none"> ✓ ✓✓✓ ✓✓ ✓✓✓ ✓✓ ✓✓ ✓✓
Manufacture of metals and fabricated metal products and electrical equipment	<ul style="list-style-type: none"> Production of equipment for low carbon energy systems and vehicles e.g. CHP Networks; Clean Coal, Carbon Capture & Sequestration; Biomass plant; Wind power; Marine Energy; Smart metering; Intelligent grid management; Energy efficient equipment – industrial motors, domestic heating 	<ul style="list-style-type: none"> Ability to retro-fit Financing Skills to develop Development of technologies Incentives or regulation to encourage use Skills 	<ul style="list-style-type: none"> Economic development initiatives – training in product development with Business Link and other stakeholders (e.g. Chambers of Commerce and local colleges) Apply for European funding for grants to undertake training and consultancy to assist with new low carbon product development. 10. Opportunity & Regulatory Assessment

10.1 Opportunity Assessment

Each opportunity identified above has been assessed to determine the impact on jobs and how the particular opportunity supports meeting of carbon related drivers. For each Local Authority the relevance of the opportunity has been indicated. Relevance has been determined based on current employment in the sector, changes in employment in the sector, relevant specialisms and access to clusters in the area. The impact of each opportunity has then been assessed as either increasing, decreasing or stabilising job numbers within the area. Each opportunity has been assessed as to whether it would be beneficial to coordinate at a City Region based on the similarity of actions across the relevant Local Authorities, the scale of the opportunity and the likely ability to coordinate actions. Results for this are given in Table 10.1.

10.2 Key Drivers for Opportunities

Regulation is a key driver for the development of a LCE. As well as the high level UK Climate Change Act 2008 which sets long-term targets there are a range of regulations, financial incentives, initiatives and voluntary targets which aim to reduce carbon emissions. For each opportunity identified in the project, some of the key drivers specific to the opportunity have been identified in Table 10.2. In all cases the regulation or government initiatives support the opportunity being implemented. There are a substantial number of drivers which directly or indirectly underpin all opportunities; these include:

- UK Climate Change Programme
- UK Low Carbon Transition Plan
- Climate Change Act 2008
- Carbon Budgets Order, Carbon Accounting Regulations and associated legislation relating to carbon budgets
- EU Emissions Trading Schemes, Climate Change Levy and Climate Change Agreements
- Carbon Reduction Commitment Energy Efficiency Scheme (equivalent to a UK ETS)
- Low Carbon Industrial Strategy

It is worth noting that there are a variety of exemptions applicable for the various pieces of legislation but there may be instances whereby it may indirectly apply, e.g. CRC Energy Efficiency Scheme applies directly to larger organisations but may impact the supply chains, etc., resulting in an indirect impact upon SMEs.

Table 10.1 - Opportunity Assessment for Telford & Wrekin and City Region

Sector	Opportunity	Telford & Wrekin		City	
		Relevance	Impact	Relevance	Impact
Construction	• Low carbon renovation of LA council stock and wider city housing	✓	↑	✓	H
	• Provision of low carbon services and trades e.g. plumbing, insulation, electrics	✓	↔	✓	M
	• Provision of low carbon equipment	✓	↔		
Manufacture of automotive and transport equipment	• Manufacturing of low carbon transport equipment (including supply chain)	✓	↔	✓	H
	• Low carbon vehicle design (e.g. Hybrid and electric vehicles; fuel cell; innovative propulsion; new mobility concepts; thermo-electric generation; re-engineered internal combustion engine; brake energy regeneration; lightweight construction; efficient engine technologies; energy and heat management in the vehicle; recyclable vehicles; Intelligent Navigation Systems).	✓	↔	✓	H
	• Development of alternative fuels and associated infrastructure (e.g. biofuels, hydrogen produced free of CO ₂)	✓	↔	✓	H
Manufacture of non-metallic mineral goods	• Low carbon design, construction methods and materials	✓	↔		
	• Cost savings by use of more efficient (and low carbon) vehicles and equipment e.g. glass shaping machinery	✓	↔	✓	L
Public services	• Ability to procure low carbon services/products for the sector	✓	↑	✓	H
	• “Low Carbon” Education	✓	↔	✓	H
	• Use of planning to support development of LCE (transport, energy, waste management, etc)	✓	↑	✓	H
	• Defence sector support/advice to reduce carbon emissions	✓	↑		
Manufacture of metals and fabricated metal products and electrical equipment	• Low carbon processes	✓	↔	✓	L

11. Summary

The highest employment within the eight key sectors of opportunity area public services; manufacture of metals, fabricated metal products and electrical equipment; manufacture of motor vehicles and transport, and; transport, storage and communications. Telford & Wrekin had growth in transport, storage and communications; construction, and; public services over the period 2003-2008. Falls were experienced in the lower employment sectors of farming, food and drink and environmental goods and services.

Telford & Wrekin has a number of relevant clusters including being part of a technology corridor, an Environmental Technologies cluster “MetNet”, the provision of environmental support via Business Environmental Support Scheme for Telford (BESST) and nearby access to Harper Adams University College and Wolverhampton University. Based on the ranking exercise, key opportunities for Telford and Wrekin were found to be manufacture of motor vehicles and transport; construction, and; manufacture of materials and fabricated metal products. Opportunities that were assessed as having the potential to increase employment included:

- Construction: low carbon renovation of housing stock;
- Public Services: supporting the defence sector reducing their carbon footprint;
- Transport, Storage and Logistics: sustainable logistics and use of rail freight to boost the transport, storage and communications sector within the area; development of alternative fuels and infrastructure;
- Environmental goods and services: increased non-metal waste recycling; provision of advice on low carbon to businesses; development of low carbon community energy companies/schemes
- Manufacture of food and beverages: use of food waste to generate energy.

Low carbon procurement, the provision of low carbon education and planning to support the low carbon economy development were all considered to be important public sector opportunities. Barriers were seen to include a lack of a high technology/green business park and access to skills.
